

"Bioinformatics is the application of <u>computers</u> to the collection, archiving, organization, and analysis of <u>biological data</u>."

... A hybrid of biology and computer science

"Bioinformatics is the application of <u>computers</u> to the collection, archiving, organization, and analysis of <u>biological data</u>."

Bioinformatics is computer aided biology!

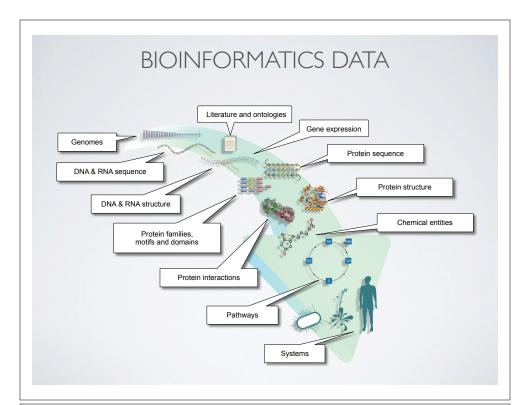

"Bioinformatics is the application of <u>computers</u> to the collection, archiving, organization, and analysis of <u>biological data</u>."

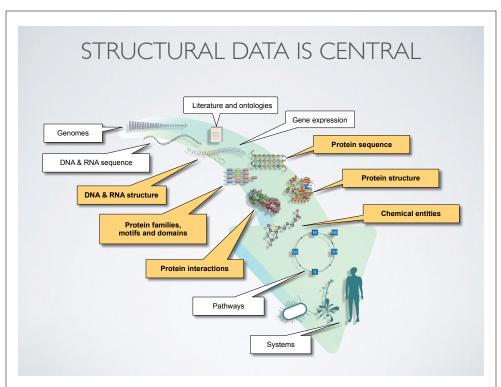

Bioinformatics is computer aided biology!

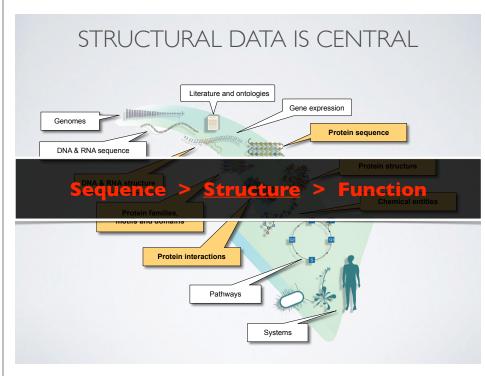

**Goal: Data to Knowledge** 

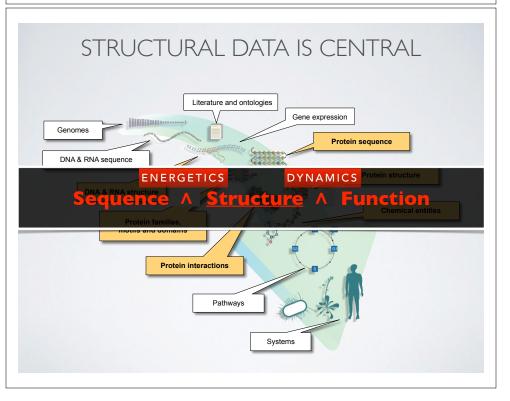

So what is **structural bioinformatics**? So what is **structural bioinformatics**? ... computer aided structural biology! Aims to characterize and interpret biomolecules and their assembles at the molecular & atomic level Why should we care? Why should we care? Because biomolecules are "nature's robots"

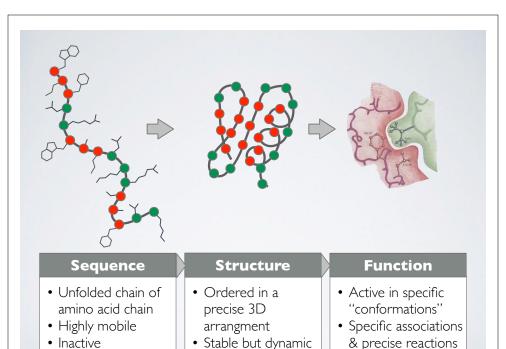

... and because it is only by coiling into specific 3D structures that they are able to perform their functions

# In daily life, we use machines with functional *structure* and *moving parts*

## Genomics is a great start ....

#### Track Bike - DL 175

| REF.<br>NO.      | IBM<br>NO.       | DESCRIPTION  |

#### **PDB – A Billion Atom Archive**

> 1 billion atoms in the asymmetric units

~140,000 Structures in May 2018

SDSC SAN DIEGO SUPERCOMPUTER CENTE

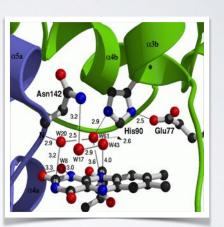

Slide Credit: Peter Rose

UC San Diego

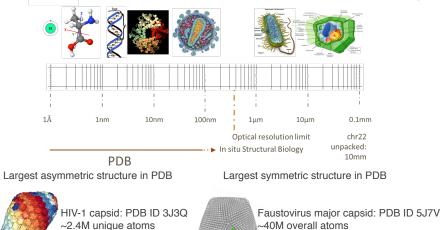

#### **Motivation 1**:

Detailed understanding of molecular interactions

Provides an invaluable structural context for conservation and mechanistic analysis leading to functional insight.

## **Growing Structure Size and Complexity**

SDSC SAN DIEGO Supercomputer center Slide Credit: Peter Rose

UC San Diego

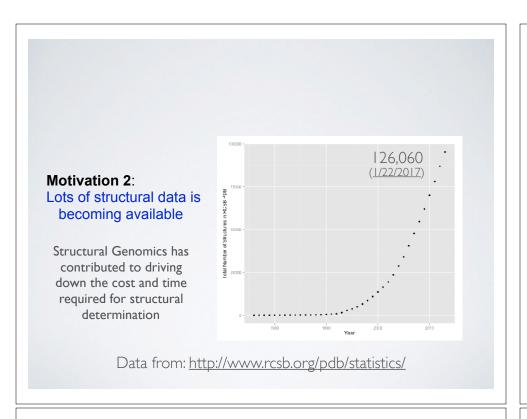

#### **Motivation 1**:

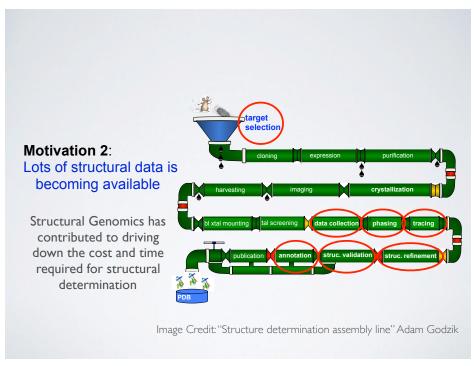

Detailed understanding of molecular interactions

Computational modeling can provide detailed insight into functional interactions, their regulation and potential consequences of perturbation.

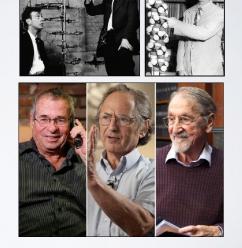

Grant et al. PLoS. Comp. Biol. (2010)

#### **Motivation 3:**

Theoretical and computational predictions have been, and continue to be, enormously valuable and influential!

## SUMMARY OF KEY MOTIVATIONS

#### **Sequence > Structure > Function**

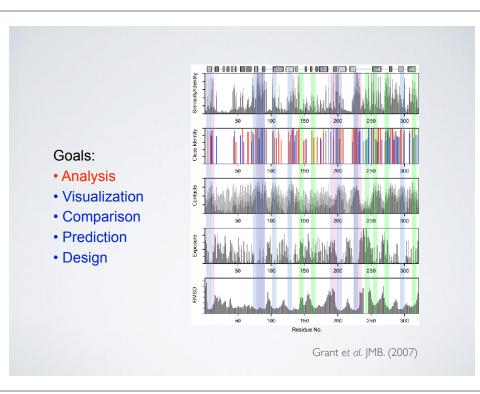

• Structure determines function, so understanding structure helps our understanding of function

#### Structure is more conserved than sequence

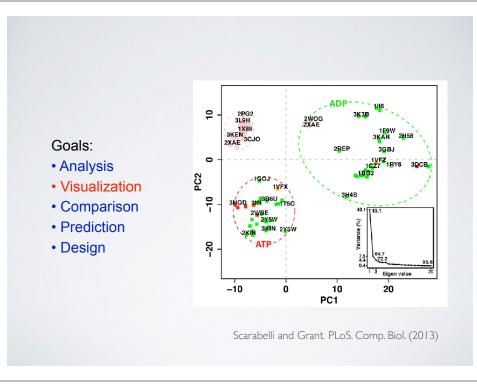

Structure allows identification of more distant evolutionary relationships

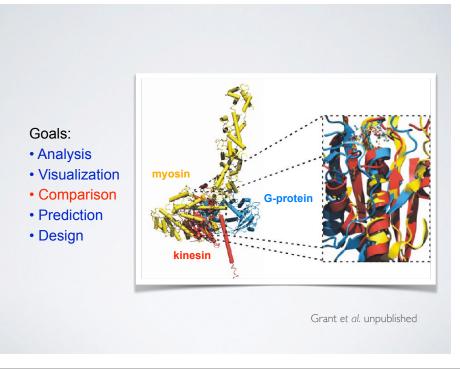

#### Structure is encoded in sequence

 Understanding the determinants of structure allows design and manipulation of proteins for industrial and medical advantage

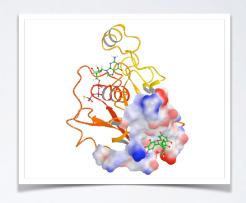

- Analysis
- Visualization
- Comparison
- Prediction
- Design

Grant et al. PLoS One (2011, 2012)

# Goals: • Analysis • Visualization • Comparison • Prediction • Design Grant et al. PLoS Biology (2011)

# MAJOR RESEARCH AREAS AND CHALLENGES

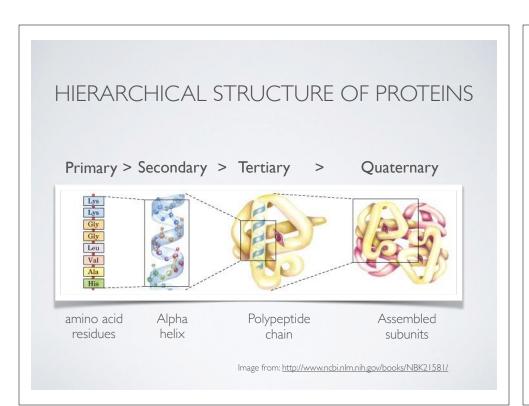

#### Include but are not limited to:

- Protein classification
- Structure prediction from sequence
- · Binding site detection
- · Binding prediction and drug design
- Modeling molecular motions
- Predicting physical properties (stability, binding affinities)
- Design of structure and function
- etc...

With applications to Biology, Medicine, Agriculture and Industry

What Does a Protein Look like?

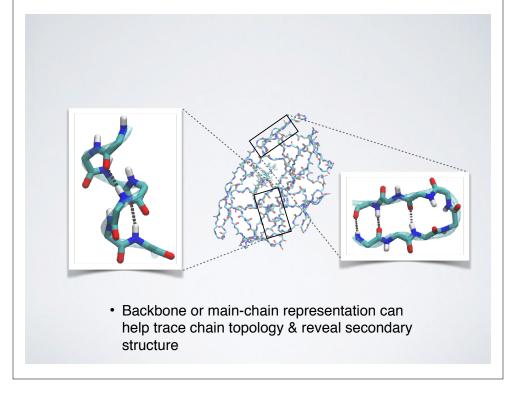

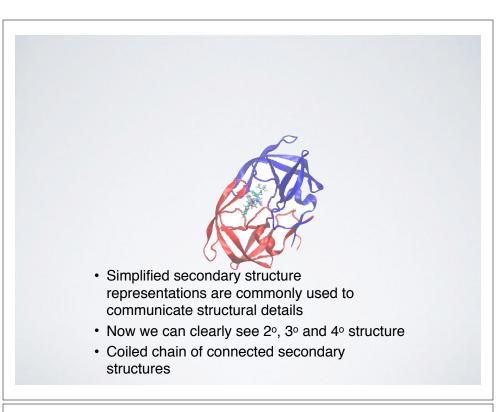

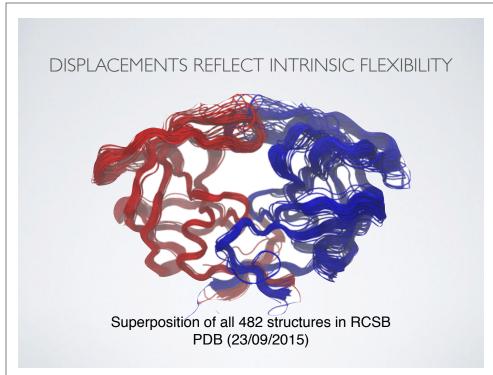

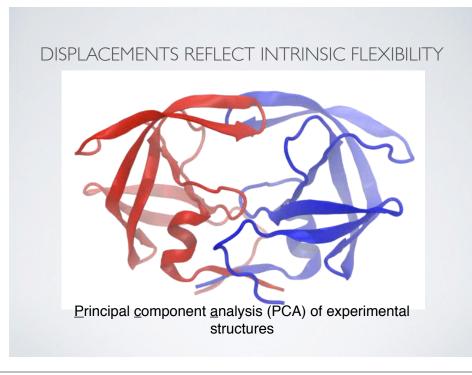

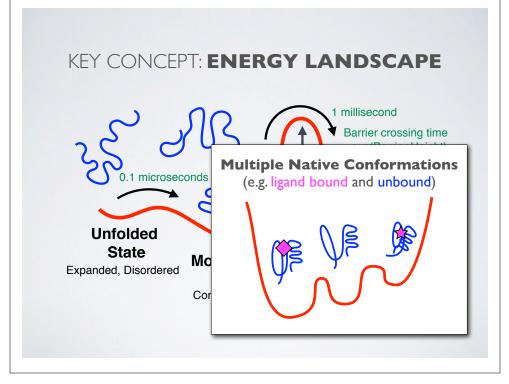

## Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

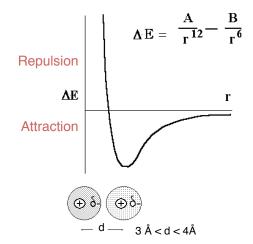

Hydrogen-Hydrogenbond donor bond acceptor

$$\begin{matrix} N {\longleftarrow} H {\longrightarrow} N \\ \delta^- & \delta^+ & \delta^- \end{matrix}$$

$$D \xrightarrow{\theta} F$$

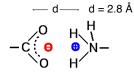

## Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

## Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

carboxyl group and amino group

(some time called IONIC BONDs or SALT BRIDGEs)

## Coulomb's law

E = Energy

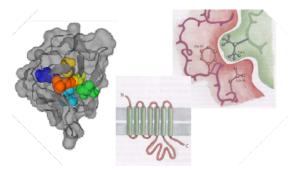

k = constant

D = Dielectric constant (vacuum = 1;  $H_2O = 80$ )  $q_1 \& q_2 = electronic charges (Coulombs)$ 

r = distance (Å)

## Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

The force that causes hydrophobic molecules or nonpolar portions of molecules to aggregate together rather than to dissolve in water is called Hydrophobicity (Greek, "water fearing"). This is not a separate bonding force; rather, it is the result of the energy required to insert a nonpolar molecule into water.

## PHYSICS-BASED POTENTIALS **ENERGY TERMS FROM PHYSICAL THEORY**

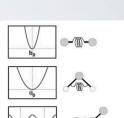

$$\underbrace{\frac{\sum_{bonds} \kappa_{i} \quad (l_{i} - l_{0})}{U_{bond}} + \underbrace{\sum_{angles} \kappa_{i} \quad (l_{i} - l_{0})}_{U_{angle}} + \underbrace{\sum_{dihedrals} k_{i}^{dihe} [1 + \cos(n_{i}\phi_{i} + \delta_{i})]}_{U_{dihedral}} + \underbrace{\sum_{i} \sum_{j \neq i} q_{i}q_{j}}_{I_{i}}_{\epsilon r_{ij}} + \underbrace{\sum_{i} \sum_{j \neq i} q_{i}q_{j}}_{\epsilon r_{ij}}$$

 $U_{bond}$  = oscillations about the equilibrium bond length

 $U_{angle}$  = oscillations of 3 atoms about an equilibrium bond angle

U<sub>dihedral</sub> = torsional rotation of 4 atoms about a central bond

U<sub>nonbond</sub> = non-bonded energy terms (electrostatics and Lenard-Jones)

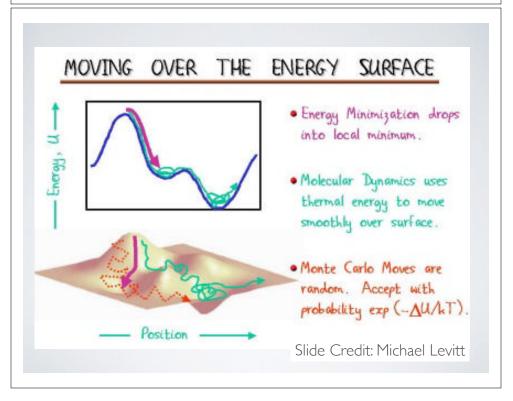

CHARMM P.E. function, see: http://www.charmm.org/

## TOTAL POTENTIAL ENERGY The total potential energy or enthalpy fully defines the system, U. ·The forces are the gradients of the energy. $F(\infty) = -dU/d\times \cdot$ The energy is a sum of independent terms for: Bond, Bond angles, Torsion angles and nonbonded atom pairs. Position Slide Credit: Michael Levitt

### PHYSICS-ORIENTED APPROACHES

#### Weaknesses

Fully physical detail becomes computationally intractable Approximations are unavoidable

(Quantum effects approximated classically, water may be treated crudely) Parameterization still required

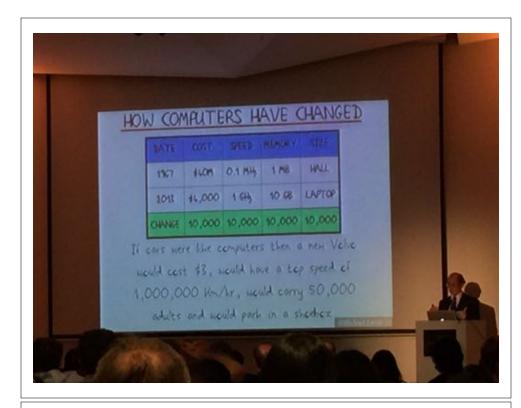

#### Strengths

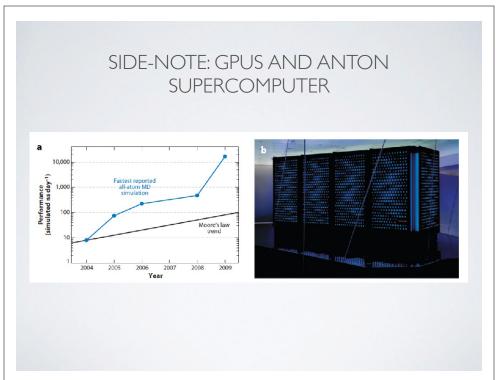

Interpretable, provides guides to design Broadly applicable, in principle at least Clear pathways to improving accuracy

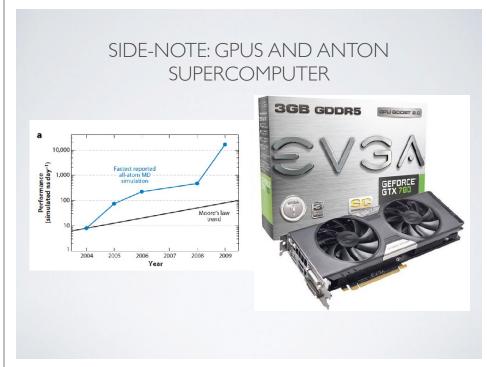

#### Status

Useful, widely adopted but far from perfect Multiple groups working on fewer, better approxs Force fields, quantum

entropy, water effects Moore's law: hardware improving

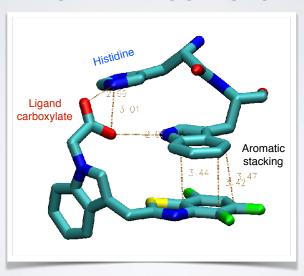

KEY CONCEPT: POTENTIAL FUNCTIONS
DESCRIBE A SYSTEMS ENERGY AS A FUNCTION
OF ITS STRUCTURE

Two main approaches:

(1). Physics-Based

(2). Knowledge-Based

#### KNOWLEDGE-BASED DOCKING POTENTIALS

# ENERGY DETERMINES **PROBABILITY** (STABILITY)

Basic idea: Use probability as a proxy for energy

Boltzmann:  $p(r) \propto e^{-E(r)/RT}$ 

Probability

Inverse Boltzmann:

$$E(r) = -RT \ln [p(r)]$$

#### Example: ligand carboxylate O to protein histidine N

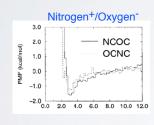

Find all protein-ligand structures in the PDB with a ligand carboxylate O

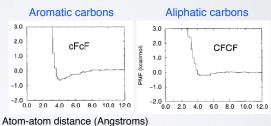

- 1. For each structure, histogram the distances from O to every histidine N
- 2. Sum the histograms over all structures to obtain  $p(r_{O-N})$
- 3. Compute  $E(r_{O-N})$  from  $p(r_{O-N})$

# KNOWLEDGE-BASED DOCKING POTENTIALS

"PMF", Muegge & Martin, J. Med. Chem. (1999) 42:791

A few types of atom pairs, out of several hundred total

 $E_{prot-lig} = E_{vdw} + \sum_{paire(ii)} E_{type(ij)}(r_{ij})$ 

#### KNOWLEDGE-BASED POTENTIALS

#### Weaknesses

Accuracy limited by availability of data

#### Strengths

Relatively easy to implement Computationally fast

#### Status

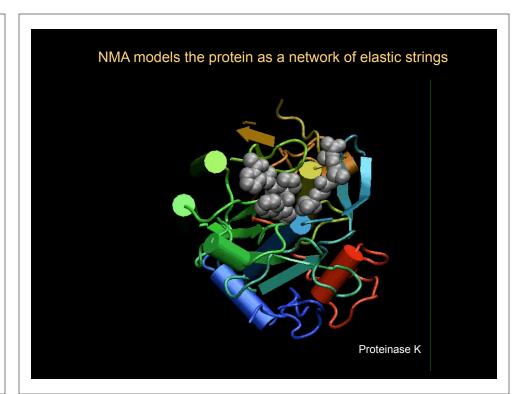

Useful, far from perfect
May be at point of diminishing returns
(not always clear how to make improvements)

## Hand-on time!

https://bioboot.github.io/bimm143 S18/lectures/#11

Focus on section 6 & 7

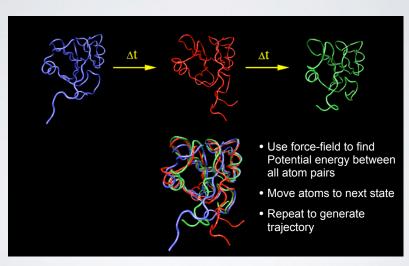

# **Optional**: Stop here for Today!

[ Muddy Point Assessment ]

#### PREDICTING FUNCTIONAL DYNAMICS

- Proteins are <u>intrinsically flexible</u> molecules with internal motions that are often intimately coupled to their biochemical function
  - E.g. ligand and substrate binding, conformational activation, allosteric regulation, etc.
- Thus knowledge of dynamics can provide a deeper understanding of the <u>mapping of structure to</u> function
  - Molecular dynamics (MD) and normal mode analysis (NMA) are two major methods for predicting and characterizing molecular motions and their properties

#### **MOLECULAR DYNAMICS SIMULATION**

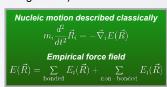

McCammon, Gelin & Karplus, *Nature* (1977) [See: https://www.youtube.com/watch?v=ui1ZysMFcKk]

▶ Divide time into discrete (~1fs) time steps (∆t) (for integrating equations of motion, see below)

At each time step calculate pair-wise atomic forces (F(t)) (by evaluating force-field gradient)

▶ Divide time into discrete (~1fs) time steps (Δt) (for integrating equations of motion, see below)

▶ Divide time into discrete (~1fs) time steps (∆t) (for integrating equations of motion, see below)

▶ At each time step calculate pair-wise atomic forces (F(t)) (by evaluating force-field gradient)

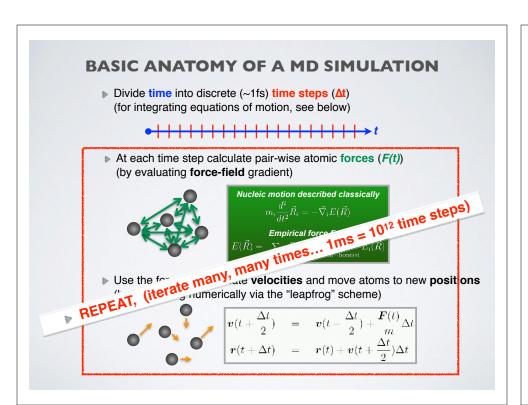

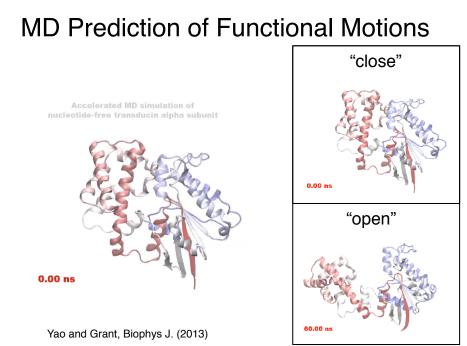

Nucleic motion described classically 
$$m_i \frac{d^2}{dt^2} \vec{R}_i = -\vec{\nabla}_i E(\vec{R})$$
 Empirical force field 
$$E(\vec{R}) = \sum_{\text{bonded}} E_i(\vec{R}) + \sum_{\text{non-bonded}} E_i(\vec{R})$$

Use the forces to calculate velocities and move atoms to new positions (by integrating numerically via the "leapfrog" scheme)

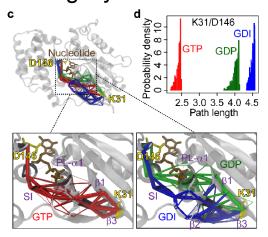

$$egin{array}{|c|c|c} oldsymbol{v}(t+rac{\Delta t}{2}) & = & oldsymbol{v}(t-rac{\Delta t}{2}) + rac{oldsymbol{F}(t)}{m} \Delta t \\ oldsymbol{r}(t+\Delta t) & = & oldsymbol{r}(t) + rac{oldsymbol{v}(t+rac{\Delta t}{2})}{2} \Delta t \end{array}$$

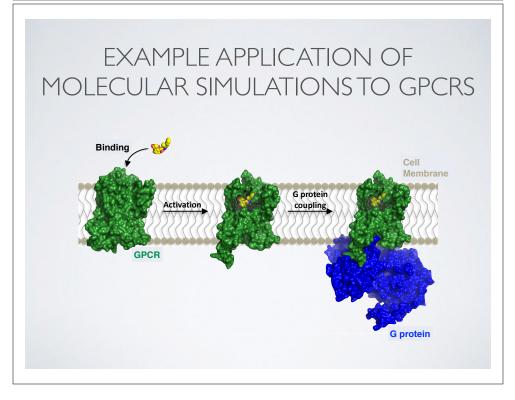

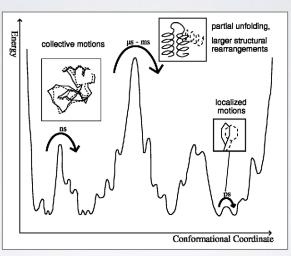

## Simulations Identify Key Residues Mediating Dynamic Activation

Yao ... Grant, <u>Journal of Biological Chemistry</u> (2016)

## PROTEINS JUMP BETWEEN MANY, HIERARCHICALLY ORDERED "CONFORMATIONAL SUBSTATES"

H. Frauenfelder et al., Science 229 (1985) 337

#### **MOLECULAR DYNAMICS IS VERY**

**Example**: F<sub>1</sub>-ATPase in water (183,674 atoms) for 1 nanosecond:

=> 106 integration steps

=> 8.4 \* 10<sup>11</sup> floating point operations/step [n(n-1)/2 interactions]

Total: 8.4 \* 10<sup>17</sup> flop

(on a 100 Gflop/s cpu: ca 25 years!)

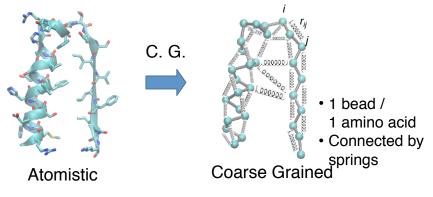

#### ... but performance has been improved by use of:

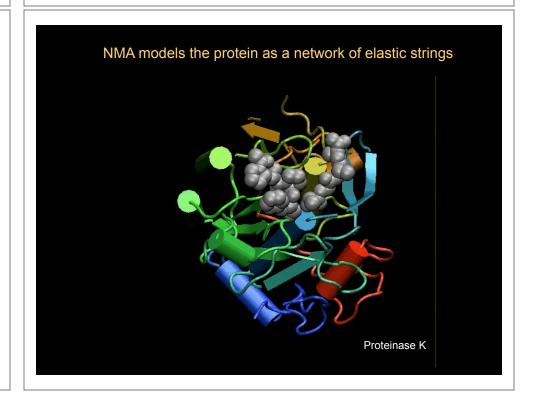

multiple time stepping ca. 2.5 years fast multipole methods parallel computers ca. 5 days ca. 1 day (Anton supercomputer

## COARSE GRAINING: NORMAL MODE ANALYSIS

(NMA)

- MD is still time-consuming for large systems
- Elastic network model NMA (ENM-NMA) is an example of a lower resolution approach that finishes in seconds even for large systems.

## **SUMMARY**

- Structural bioinformatics is computer aided structural biology
- Described major motivations, goals and challenges of structural bioinformatics
- Reviewed the fundamentals of protein structure
- Introduced both physics and knowledge based modeling approaches for describing the structure, energetics and dynamics of proteins computationally
