“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

... A hybrid of biology and computer science

“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

Bioinformatics is computer aided biology!

“Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data.”

Bioinformatics is computer aided biology!

Goal: Data to Knowledge

So what is **structural bioinformatics**?

So what is **structural bioinformatics**?

... computer aided structural biology!

Aims to characterize and interpret biomolecules and their assemblies at the molecular & atomic level

Why should we care?

Why should we care?

Because biomolecules are “nature’s robots”

... and because it is only by coiling into **specific 3D structures** that they are able to perform their functions

BIOINFORMATICS DATA

STRUCTURAL DATA IS CENTRAL

STRUCTURAL DATA IS CENTRAL

Sequence > Structure > Function

DNA & RNA structure

Protein structure

Protein families, motifs and domains

Chemical entities

Protein interactions

Pathways

Systems

STRUCTURAL DATA IS CENTRAL

Sequence

- Unfolded chain of amino acid chain
- Highly mobile
- Inactive

Structure

- Ordered in a precise 3D arrangement
- Stable but dynamic

Function

- Active in specific "conformations"
- Specific associations & precise reactions

In daily life, we use machines with functional *structure* and *moving parts*

Genomics is a great start

Track Bike – DL 175

REF. NO.	IBM NO.	DESCRIPTION
1	156011	Track Frame 21", 22", 23", 24", Team Red
2	157040	Fork for 21" Frame
2	157039	Fork for 22" Frame
2	157038	Fork for 23" Frame
2	157037	Fork for 24" Frame
3	191202	Handlebar TTT Competition Track Alloy 15/16"
4		Handlebar Stem, TTT, Specify extension
5	191278	Expander Bolt
6	191272	Clamp Bolt
7	145841	Headset Complete 1 x 24 BSC
8	145842	Ball Bearings
9	190420	175 Raleigh Pistard Seta Tubular Prestavalve 27"
10	190233	Rim, 27" AVA Competition (36H) Alloy Prestavalve
11	145973	Hub, Large Flange Campagnolo Pista Track Alloy (pairs)
12	190014	Spokes, 11 5/8"
13	145837	Sleeve
14	145636	Ball Bearings
15	145170	Bottom Bracket Axle
16	145838	Cone for Sleeve
17	146473	L.H. Adjustable Cup
18	145833	Lockring
19	145239	Straps for Toe Clips
20	145834	Fixing Bolt
21	145835	Fixing Washer
22	145822	Dustcap
23	145823	R.H. and L.H. Crankset with Chainwheel
24	146472	Fixed Cup
25	145235	Toe Clips, Christophe, Chrome (Medium)
26	145684	Pedals, Extra Light, Pairs
27	123021	Chain
28	145980	Seat Post
29		Seat Post Bolt and Nut
30	167002	Saddle, Brooks
31	145933	Track Sprocket, Specify 12, 13, 14, 15, or 16 T.

- But a parts list is not enough to understand how a bicycle works

... but not the end

- We want the full spatiotemporal picture, and an ability to control it
- Broad applications, including drug design, medical diagnostics, chemical manufacturing, and energy

KEY CONCEPT: ENERGY LANDSCAPE

KEY CONCEPT: ENERGY LANDSCAPE

KEY CONCEPT: ENERGY LANDSCAPE

Today's Menu

- **Overview of structural bioinformatics**
 - Motivations, goals and challenges
- **Fundamentals of protein structure**
 - Structure composition, form and forces
- **Representing, interpreting & modeling protein structure**
 - Visualizing & interpreting protein structures
 - Analyzing protein structures
 - Modeling energy as a function of structure

Today's Menu

- **Overview of structural bioinformatics**
 - Motivations, goals and challenges
- **Fundamentals of protein structure**
 - Structure composition, form and forces
- **Representing, interpreting & modeling protein structure**
 - Visualizing & interpreting protein structures
 - Analyzing protein structures
 - Modeling energy as a function of structure

Motivation 1:
Detailed understanding of
molecular interactions

Provides an invaluable structural
context for conservation and
mechanistic analysis leading to
functional insight.

Motivation 1:
Detailed understanding of
molecular interactions

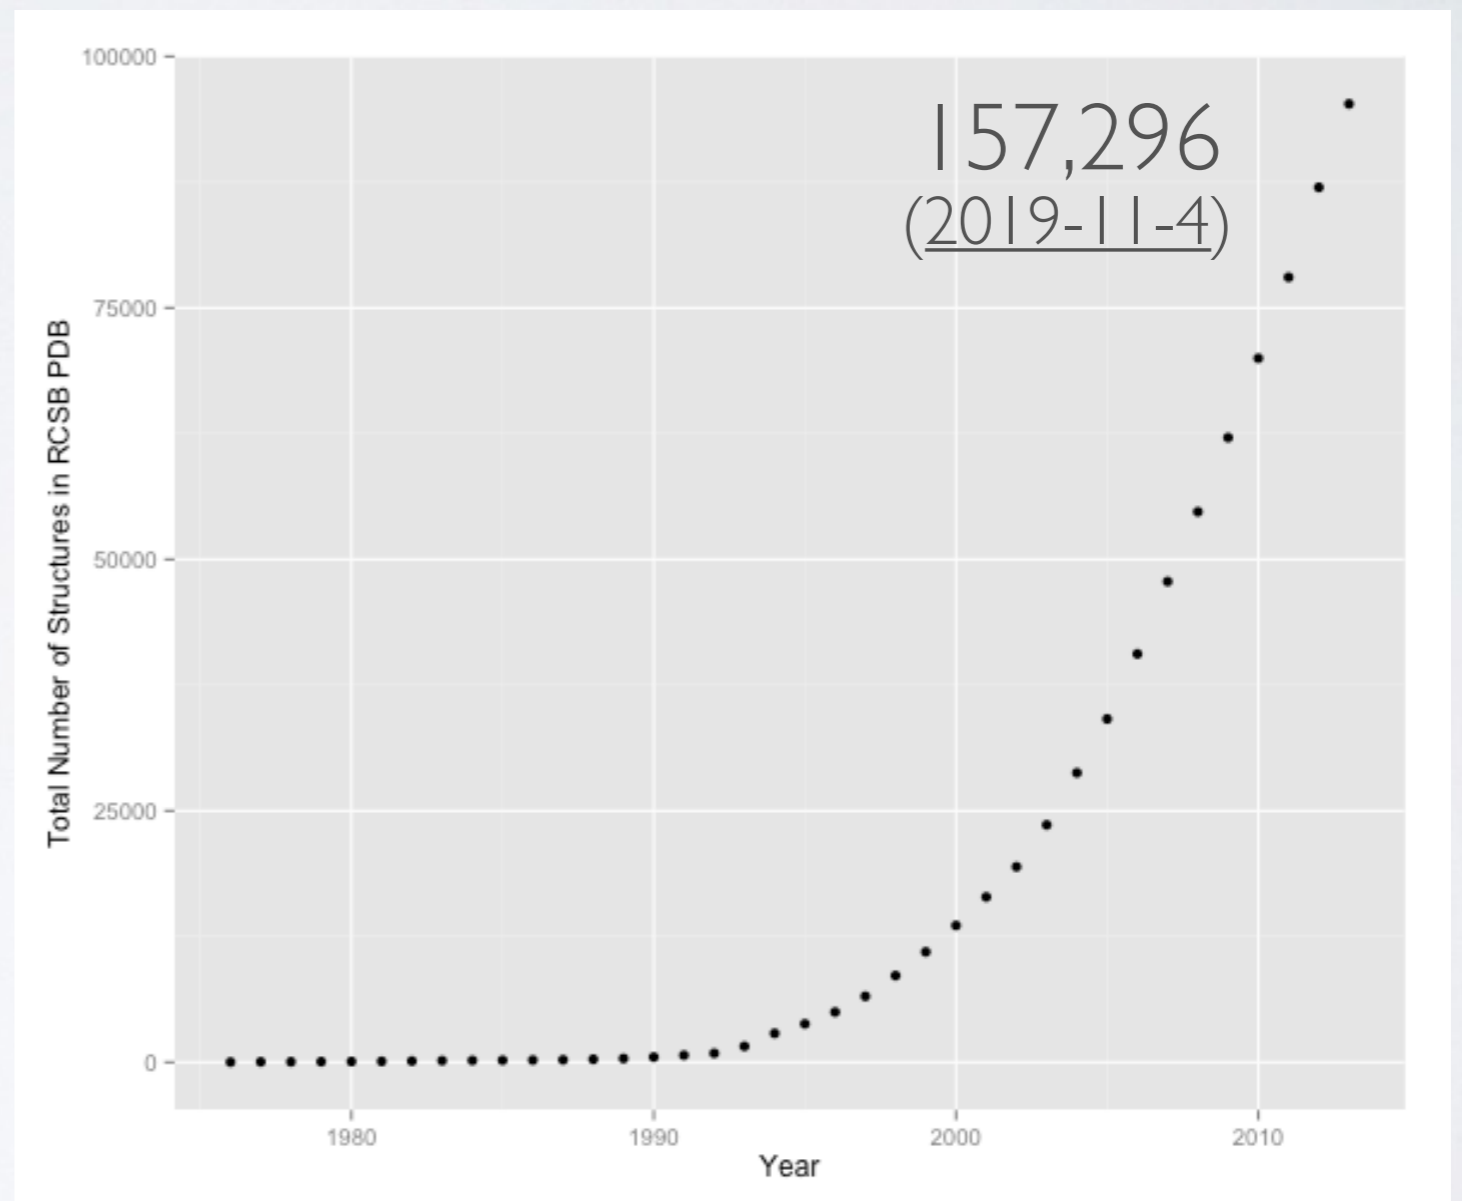

Computational modeling can
provide detailed insight into
functional interactions, their
regulation and potential
consequences of perturbation.

Motivation 2:

Lots of structural data is becoming available

Structural Genomics has contributed to driving down the cost and time required for structural determination

Data from: <https://www.rcsb.org/stats/>

Motivation 2:

Lots of structural data is becoming available

Structural Genomics has contributed to driving down the cost and time required for structural determination

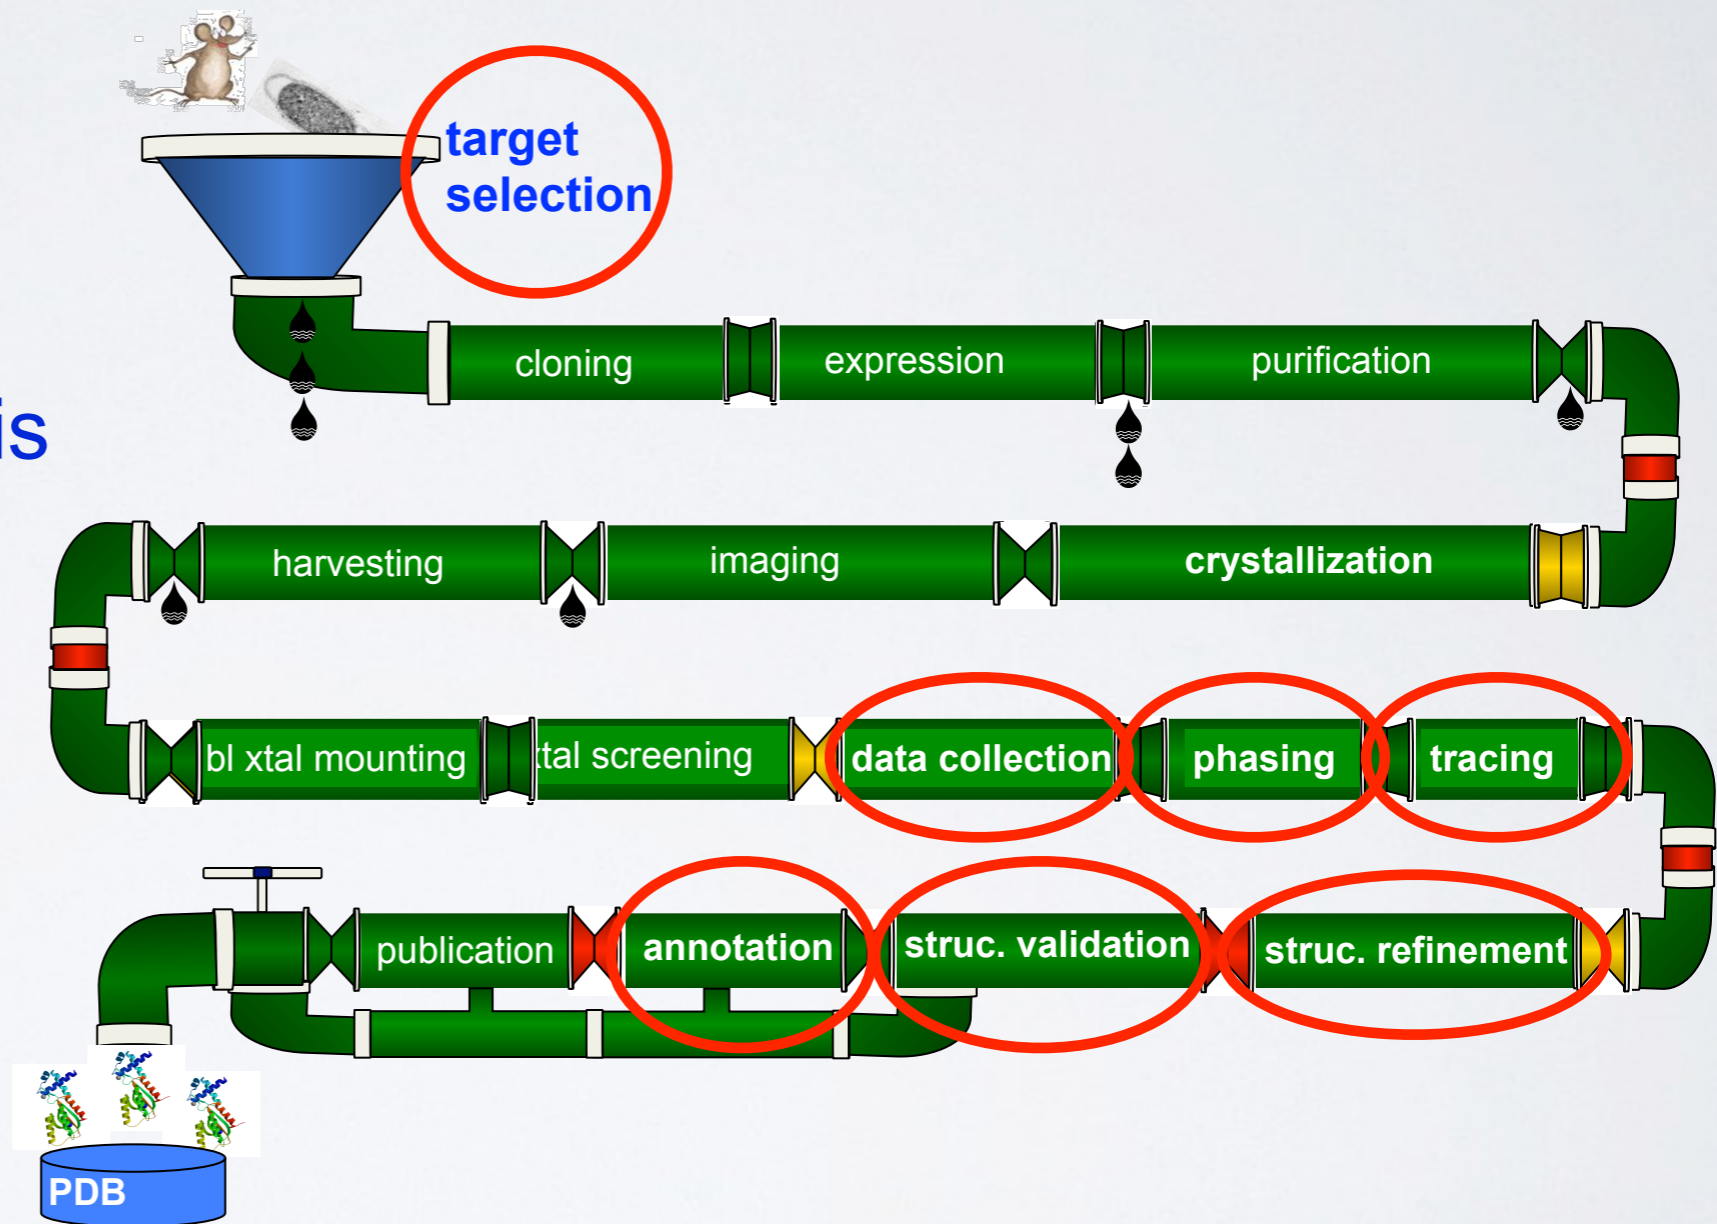

Image Credit: "Structure determination assembly line" Adam Godzik

Motivation 3:
Theoretical and
computational predictions
have been, and continue
to be, enormously
valuable and influential!

Motivation 3:

Theoretical and computational predictions have been, and continue to be, enormously valuable and influential!

SUMMARY OF KEY **MOTIVATIONS**

Sequence > Structure > Function

- Structure determines function, so understanding structure helps our understanding of function

Structure is more conserved than sequence

- Structure allows identification of more distant evolutionary relationships

Structure is encoded in sequence

- Understanding the determinants of structure allows design and manipulation of proteins for industrial and medical advantage

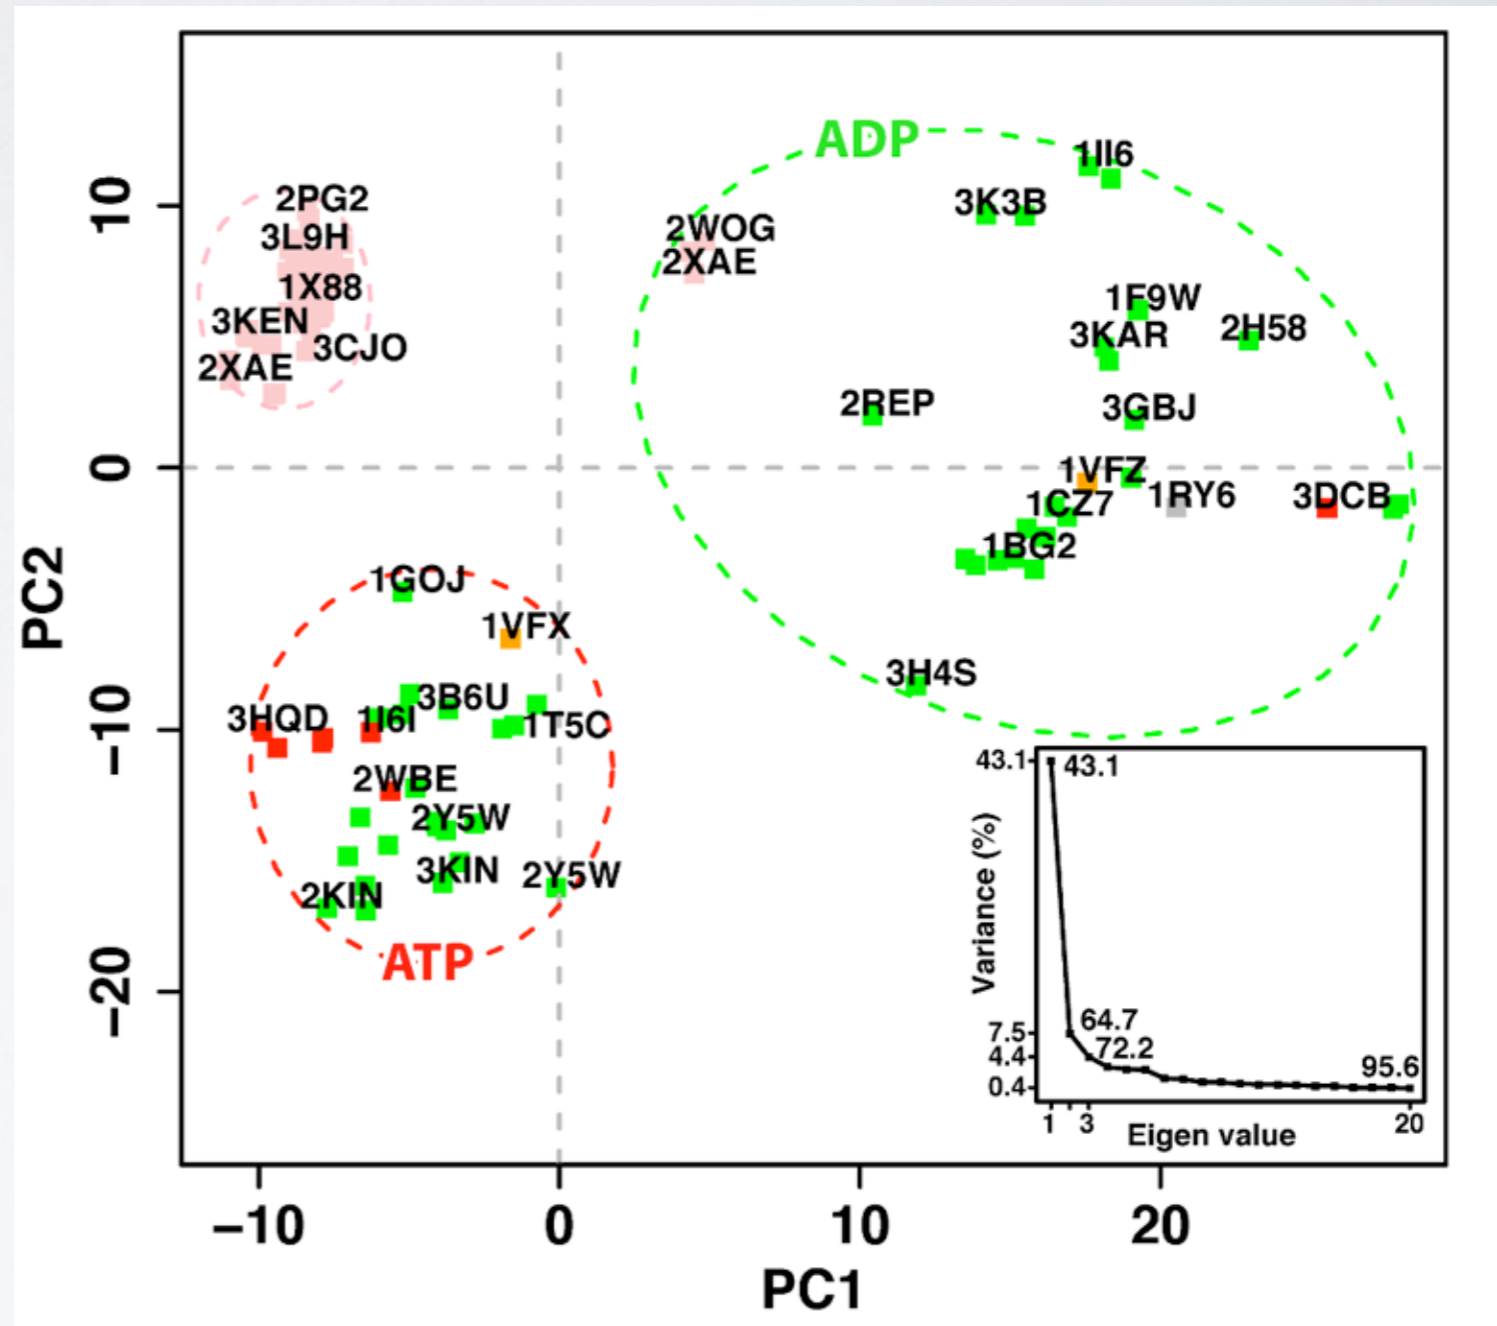

Goals:

- Visualization
- Analysis
- Comparison
- Prediction
- Design

- Comparison
- Prediction
- Design

Grant et al. PLoS Biology (2011)

MAJOR RESEARCH AREAS AND CHALLENGES

Include but are not limited to:

- Protein classification
- Structure prediction from sequence
- Binding site detection
- Binding prediction and drug design
- Modeling molecular motions
- Predicting physical properties (stability, binding affinities)
- Design of structure and function
- etc...

With applications to Biology, Medicine, Agriculture and Industry

HIERARCHICAL STRUCTURE OF PROTEINS

Primary > Secondary > Tertiary > Quaternary

amino acid
residues

Alpha
helix

Polypeptide
chain

Assembled
subunits

RECAP: AMINO ACID NOMENCLATURE

AMINO ACIDS CAN BE GROUPED BY THE PHYSIOCHEMICAL PROPERTIES

AMINO ACIDS POLYMERIZE THROUGH **PEPTIDE BOND** FORMATION

PEPTIDES CAN ADOPT DIFFERENT CONFORMATIONS BY VARYING THEIR **PHI & PSI BACKBONE TORSIONS**

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

PHI vs PSI PLOTS ARE KNOWN AS **RAMACHANDRAN DIAGRAMS**

- Steric hindrance dictates torsion angle preference
- Ramachandran plot show preferred regions of ϕ and ψ dihedral angles which correspond to major forms of secondary structure

MAJOR SECONDARY STRUCTURE TYPES

ALPHA HELIX & BETA SHEET

α -helix

- Most common form has 3.6 residues per turn (number of residues in one full rotation)
- Hydrogen bonds (dashed lines) between residue i and $i+4$ stabilize the structure
- The side chains (in green) protrude outward
- **3_{10} -helix** and **π -helix** forms are less common

MAJOR SECONDARY STRUCTURE TYPES

ALPHA HELIX & **BETA SHEET**

In antiparallel β -sheets

- Adjacent β -strands run in opposite directions
- Hydrogen bonds (dashed lines) between NH and CO stabilize the structure
- The side chains (in green) are above and below the sheet

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

MAJOR SECONDARY STRUCTURE TYPES

ALPHA HELIX & **BETA SHEET**

In parallel β -sheets

- Adjacent β -strands run in same direction
- Hydrogen bonds (dashed lines) between NH and CO stabilize the structure
- The side chains (in green) are above and below the sheet

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

Protein Data Bank (PDB) is the main repository for Biomolecular structure data

<http://www.rcsb.org>

- Welcome
- Deposit
- Search
- Visualize
- Analyze
- Download
- Learn

A Structural View of Biology

This resource is powered by the Protein Data Bank archive—information about the 3D shapes of proteins, nucleic acids, and complex assemblies that helps students and researchers understand all aspects of biomedicine and agriculture, from protein synthesis to health and disease.

As a member of the wwPDB, the RCSB PDB curates and annotates PDB data.

The RCSB PDB builds upon the data by creating tools and resources for research and education in molecular biology, structural biology, computational biology, and beyond.

Contact Us

You can get a **3D View** of and read details about the experiment and molecule

<http://www.rcsb.org>

The screenshot shows the RCSB PDB website interface for PDB entry 1IEP. The browser address bar displays www.rcsb.org/3d-view/1IEP. The navigation menu includes 'RCSB PDB', 'Deposit', 'Search', 'Visualize', 'Analyze', 'Download', 'Learn', and 'More'. The '3D View' tab is highlighted with a red box and an arrow. The main content area features the title '1IEP' and the subtitle 'CRYSTAL STRUCTURE OF THE C-ABL KINASE DOMAIN IN COMPLEX WITH STI-571.'. A note instructs users to use their mouse to interact with the structure. The 3D view shows a ribbon diagram of the protein structure in various colors (blue, yellow, orange, red) and a stick model of the ligand (STI-571) in grey. The right sidebar contains a 'Structure View' panel with various settings: Assembly (Bioassembly 1), Model (Model 1), Symmetry (None), Style (Cartoon), Color (Rainbow), Ligand (Ball & Stick), Quality (Automatic), Water (unchecked), Ions (checked), Hydrogens (checked), and Clashes (unchecked). A 'Default Structure View' button is also present.

You can display or download PDB format files for a particular entry

<http://www.rcsb.org>

The screenshot shows the RCSB PDB website interface for entry 1IEP. The browser address bar displays `www.rcsb.org/3d-view/1IEP`. The navigation bar includes links for Home, Gmail, Gcal, GitHub, BIMM143, BGGN213, Atmosphere, BIMM194, Blink, News, and a search icon. The main navigation menu contains: RCSB PDB, Deposit, Search, Visualize, Analyze, Download, Learn, More, and MyPDB. Below this, a secondary menu highlights '3D View' among other options like Structure Summary, Annotations, Sequence, Sequence Similarity, Structure Similarity, and Experiment. The main content area features the entry ID '1IEP' and the title 'CRYSTAL STRUCTURE OF THE C-ABL KINASE DOMAIN IN COMPLEX WITH STI-571.' A note instructs users on mouse controls for the 3D structure. The structure itself is a ribbon diagram with different domains colored in blue, yellow, orange, and red. On the right, a 'Structure View' panel is visible, containing dropdown menus for Assembly (Bioassembly 1), Model (Model 1), Symmetry (None), Style (Cartoon), Color (Rainbow), Ligand (Ball & Stick), and Quality (Automatic). It also includes checkboxes for Water, Ions, Hydrogens, and Clashes. A 'Default Structure View' button is at the bottom of the panel. A red box highlights the 'Display Files' and 'Download Files' buttons, with a red arrow pointing from the text above to the 'Display Files' button.

Side-Note: PDB File Format

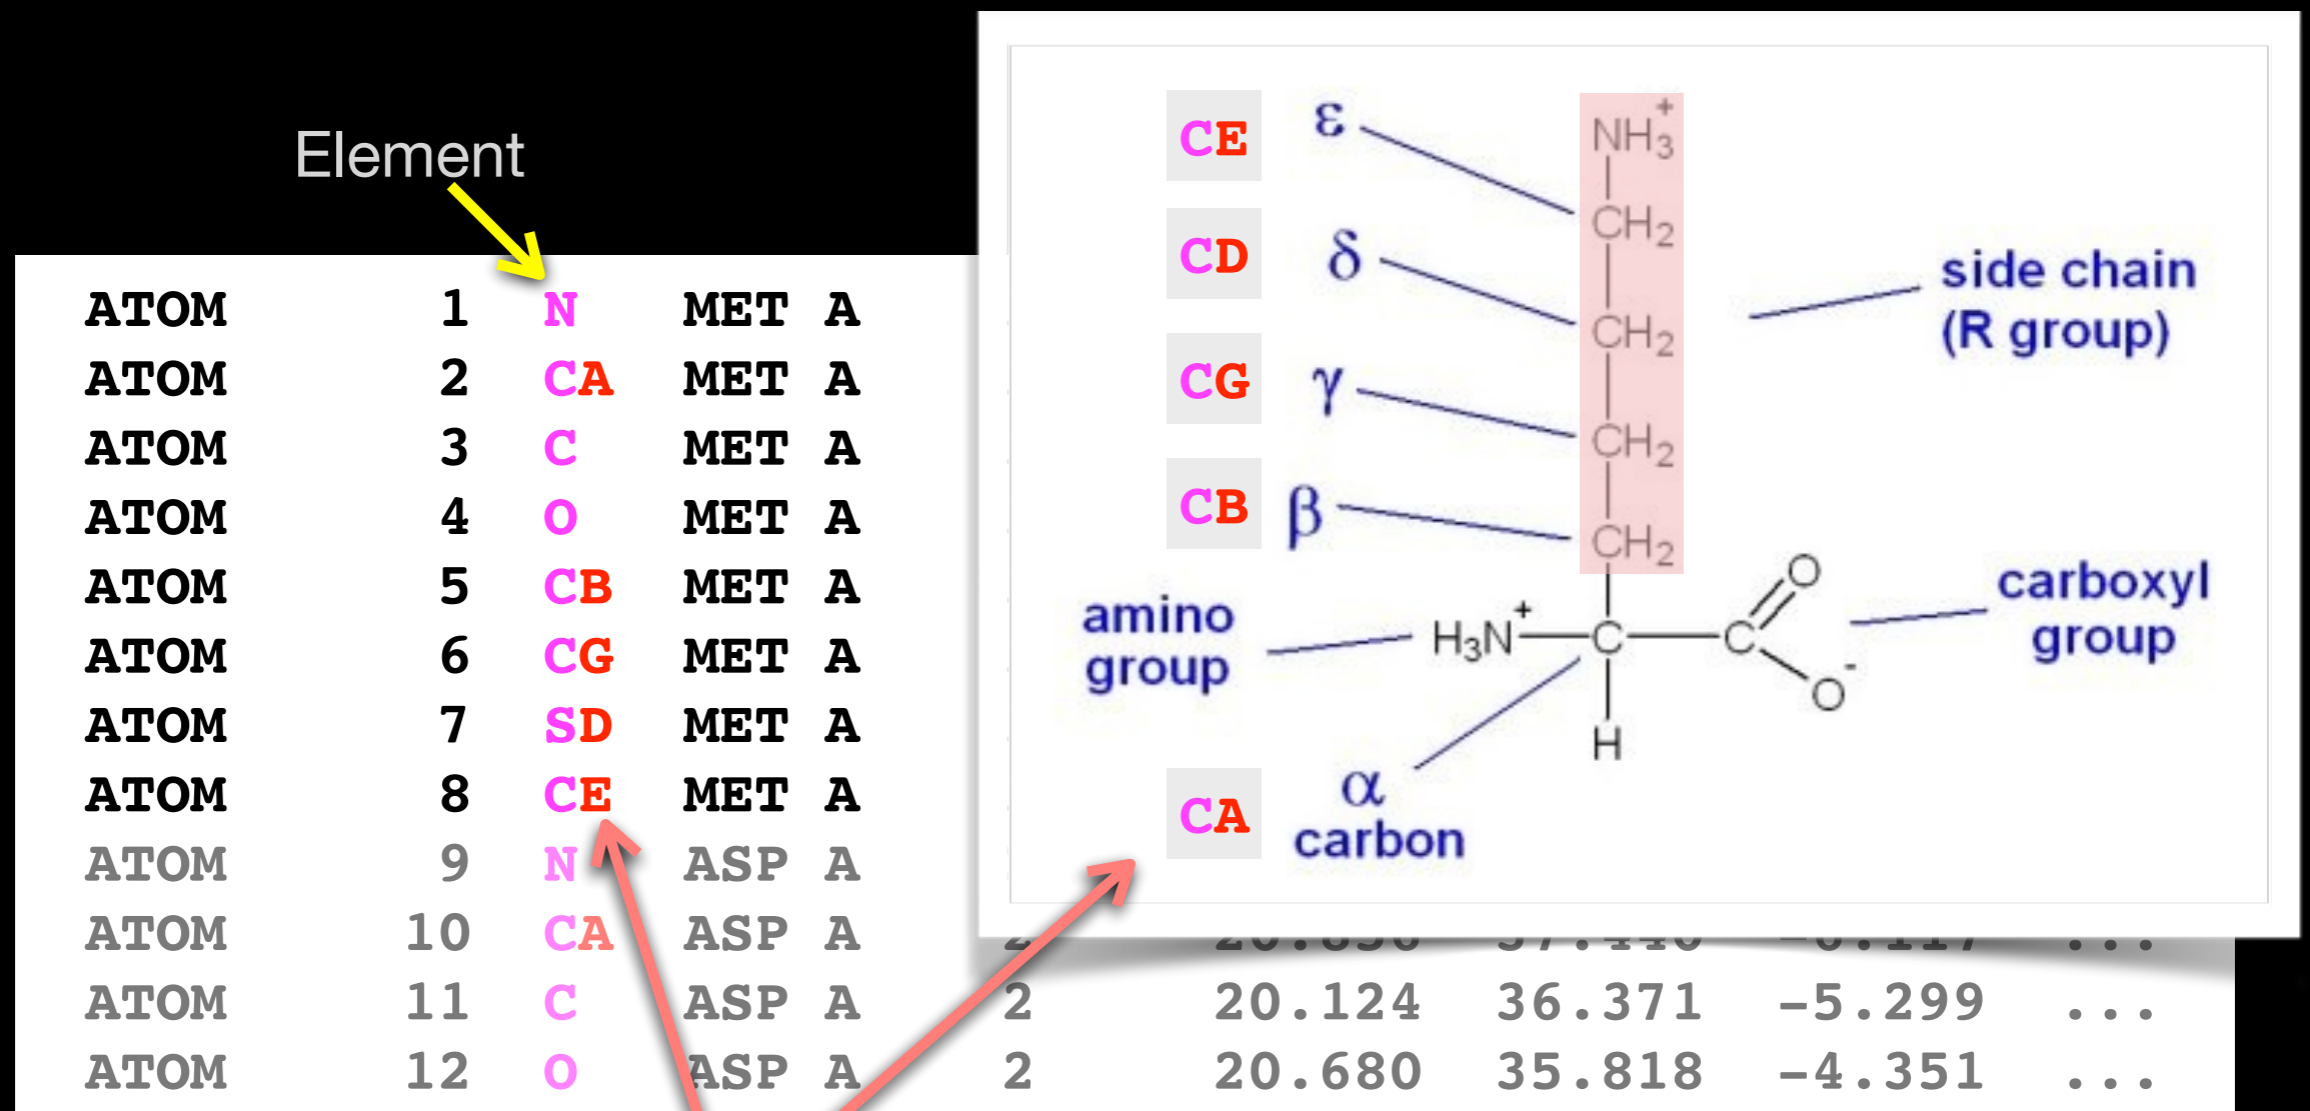

- PDB files contains atomic **coordinates** and associated information.

Element position within amino acid

What Does a Protein Look like?

Proteins are stable (and hidden) in water

Proteins closely interact with water

Proteins are close packed solid but flexible objects (globular)

Due to their large size and complexity it is often hard to see what's important in the structure

Backbone or main-chain representation can help trace chain topology

Backbone or main-chain representation can help trace chain topology & reveal secondary structure

Tube or trace representation is one of the simplest views

Tube with added colors to highlight secondary structure

Simplified "cartoon" secondary structure representations are commonly used to communicate structural details

Viewing in 3D is often essential for interpretation.
Now we can clearly see 2° and 3° structure - the
coiled chain of connected secondary structures

Viewing multiple superposed structures solved under different conditions can highlight flexible regions

Active

Inactive

Viewing multiple superposed structures solved under different conditions can highlight distinct conformations

Analyzing these multiple structures can reveal functional motions
- i.e. displacements that are essential for regulating function

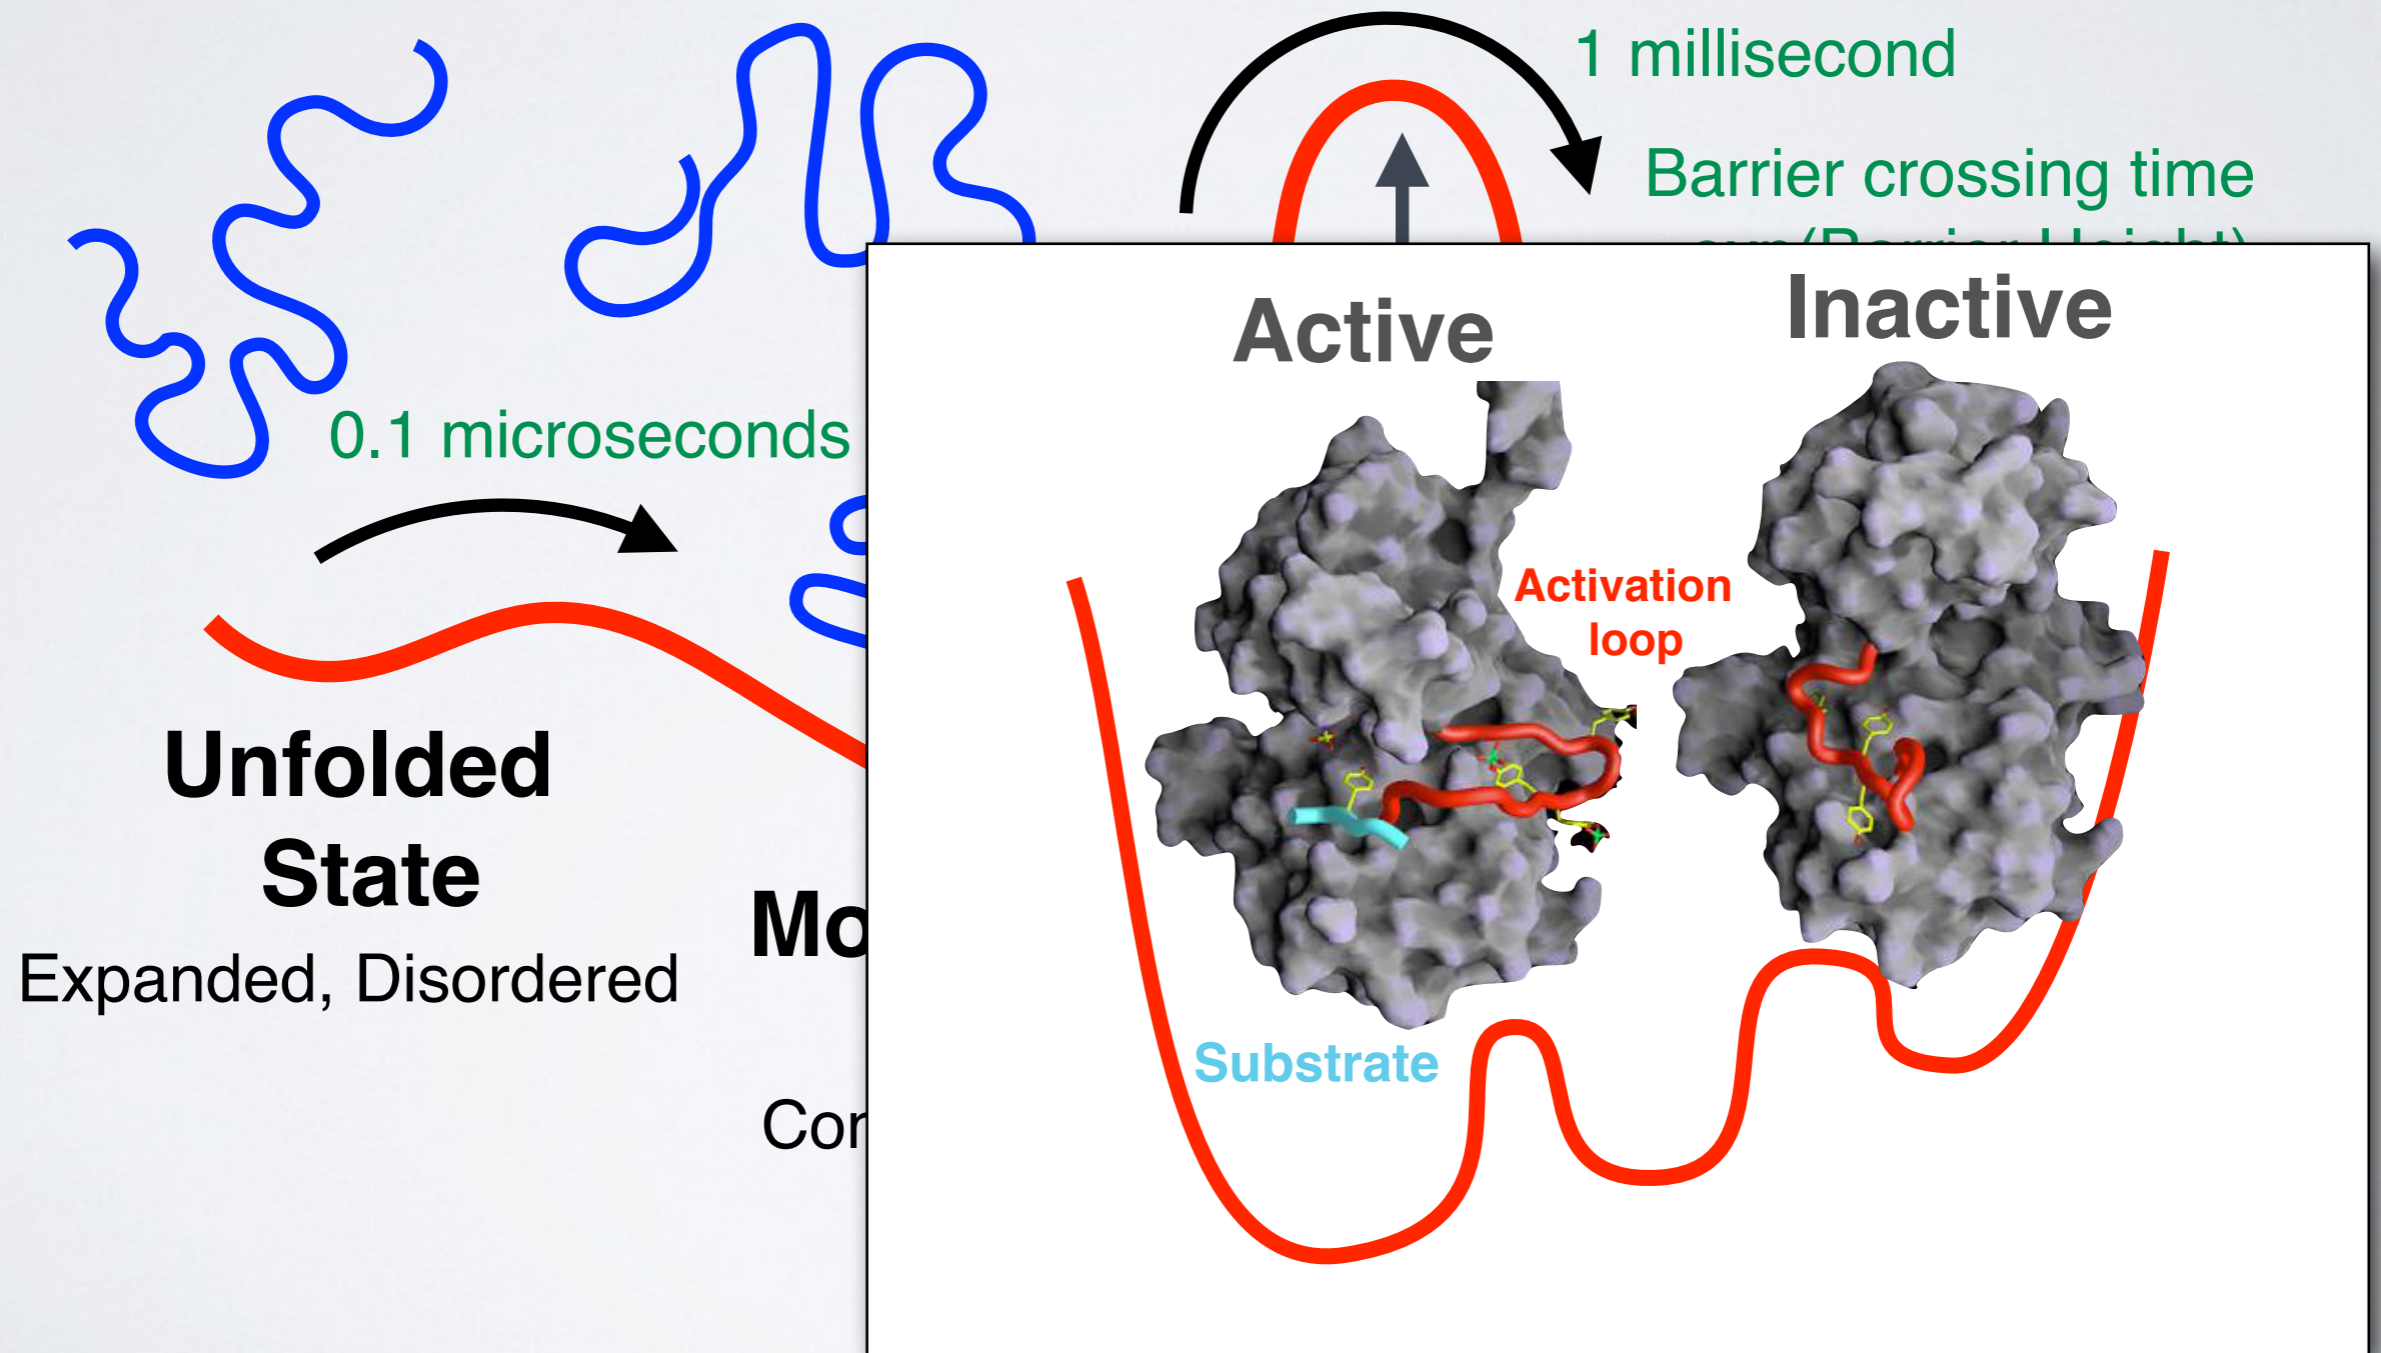

"Activation loop"

Analyzing these multiple structures can reveal functional motions
- i.e. displacements that are essential for regulating function

KEY CONCEPT: ENERGY LANDSCAPE

KEY CONCEPT: ENERGY LANDSCAPE

Normal Mode Analysis (NMA) models the protein as a network of elastic strings

NMA is a bioinformatics method to predict the intrinsic dynamics of biomolecules

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

Hydrogen-bond donor Hydrogen-bond acceptor

← d →

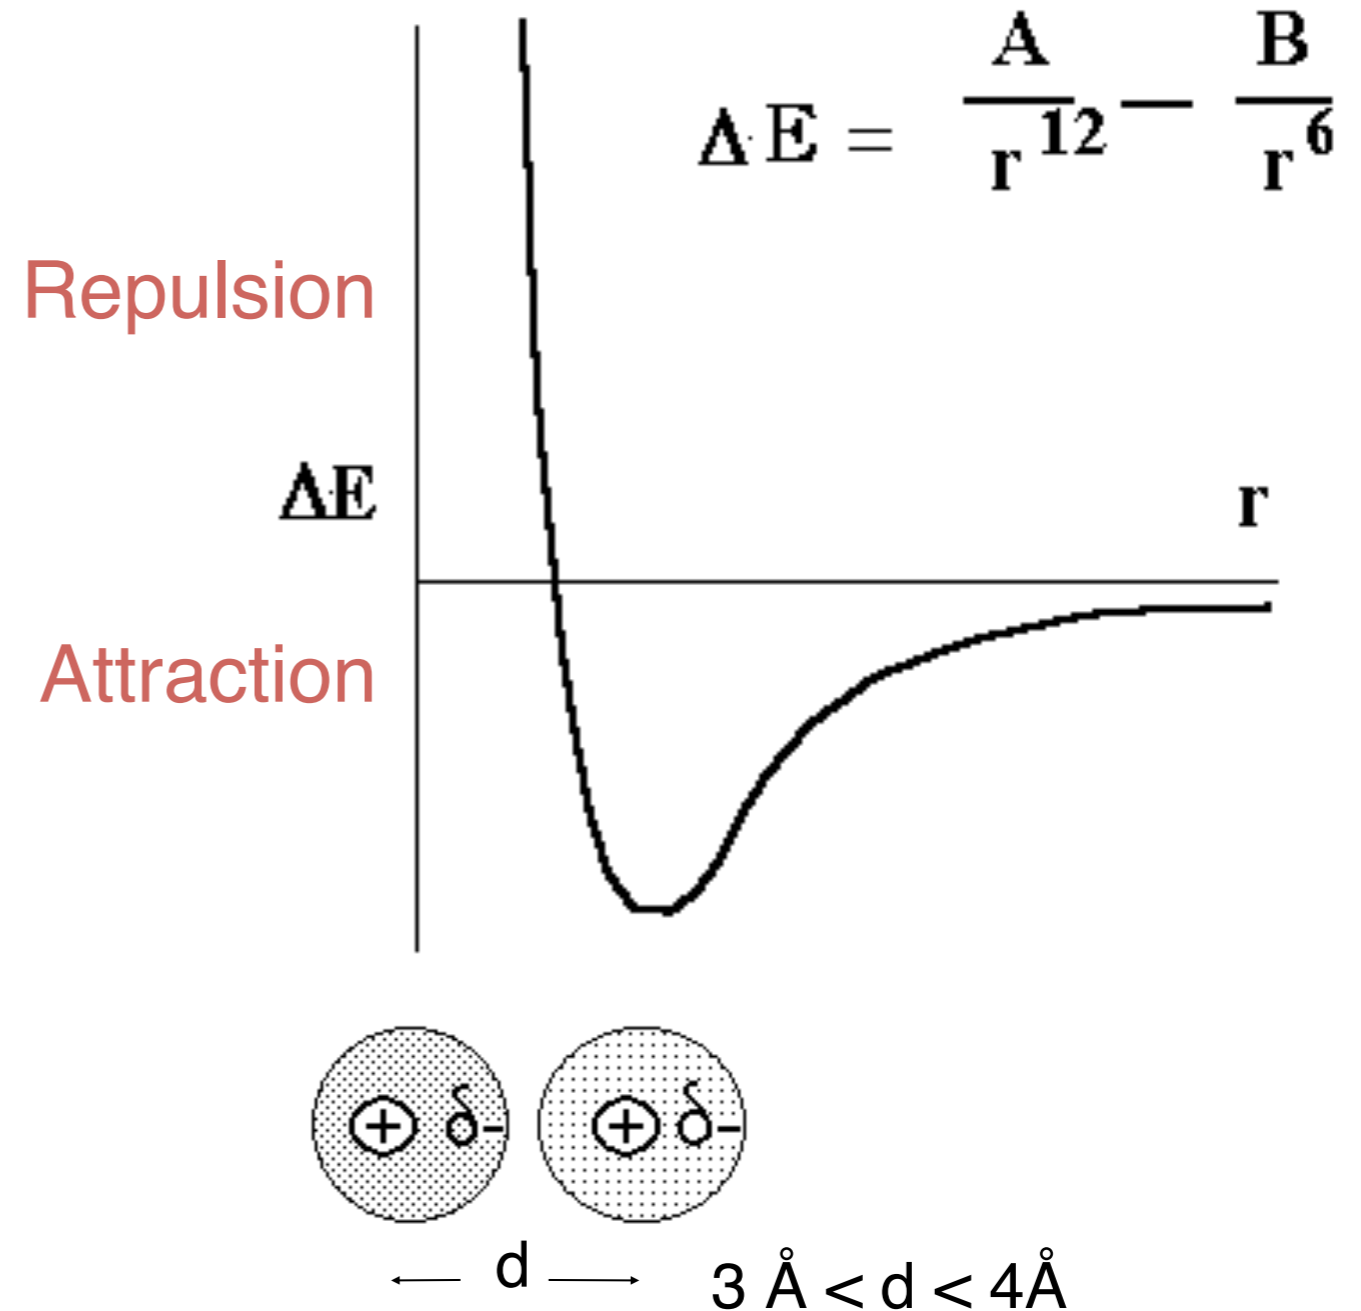

$$2.6 \text{ \AA} < d < 3.1 \text{ \AA}$$

$$150^\circ < \theta < 180^\circ$$

Key forces affecting structure:

- H-bonding
- **Van der Waals**
- Electrostatics
- Hydrophobicity

Key forces affecting structure:

- H-bonding
- Van der Waals
- **Electrostatics**
- Hydrophobicity

carboxyl group and amino group

(some time called IONIC BONDS or SALT BRIDGES)

Coulomb's law

$$E = \frac{K q_1 q_2}{D r}$$

E = Energy

k = constant

D = Dielectric constant (vacuum = 1; H₂O = 80)

q₁ & q₂ = electronic charges (Coulombs)

r = distance (Å)

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- **Hydrophobicity**

The force that causes hydrophobic molecules or nonpolar portions of molecules to aggregate together rather than to dissolve in water is called Hydrophobicity (Greek, “water fearing”). This is not a separate bonding force; rather, it is the result of the energy required to insert a nonpolar molecule into water.

KEY CONCEPT: POTENTIAL FUNCTIONS
DESCRIBE A SYSTEMS **ENERGY** AS A FUNCTION
OF ITS **STRUCTURE**

Two main approaches:

- (1). Physics-Based
- (2). Knowledge-Based

This will be the focus of the next class!

SUMMARY

- Structural bioinformatics is computer aided structural biology
 - Described major motivations, goals and challenges of structural bioinformatics
 - Reviewed the fundamentals of protein structure
 - Explored how to use R to perform advanced custom structural bioinformatics analysis!
- Introduced both physics and knowledge based modeling approaches for describing the structure, energetics and dynamics of proteins computationally

[[Muddy Point Assessment](#)]

Reference Slides

Bio3D view()

- If you want the 3D viewer in your R markdown you can install the development version of **bio3d.view**
- In your R console:

```
> install.packages("devtools")
```

```
> devtools::install_bitbucket("Grantlab/bio3d-view")
```

```
> library("bio3d.view")
```

```
> pdb <- read.pdb("5p21")
```

```
> view(pdb)
```

```
> view(pdb, "overview", col="sse")
```

NMA models the protein as a network of elastic strings

Proteinase K

NMA in Bio3D

- Normal Mode Analysis (NMA) is a bioinformatics method that can predict the major motions of biomolecules.

```
```\r\nlibrary(bio3d)\nlibrary(bio3d.view)\n```\n
```

```
```\r\npdb <- read.pdb("1hel")\nmodes <- nma( pdb )\nm7 <- mktrj(modes, mode=7, file="mode_7.pdb")\n\nview(m7, col=vec2color(rmsf(m7)))\n```\n
```

Bio3D view()

- If you want the interactive 3D viewer in Rmd rendered to **output: html_output** document:

```
```{r}
library(bio3d.view)
library(rgl)
```
```

```
```{r}
modes <- nma(read.pdb("1hel"))
m7 <- mktrj(modes, mode=7, file="mode_7.pdb")

view(m7, col=vec2color(rmsf(m7)))
rglwidget(width=500, height=500)
```
```
