

STRUCTURAL BIOINFORMATICS

Barry Grant
University of Michigan

<http://tinyurl.com/bioinf17>

BIOINF 525

24-Jan-2017

MODULE OVERVIEW

Objective: Provide an introduction to the practice of bioinformatics as well as a practical guide to using common bioinformatics databases and algorithms

- 1.1 ▶ Introduction to Bioinformatics
- 1.2 ▶ Sequence Alignment and Database Searching
- 1.3 ▶ Structural Bioinformatics
- 1.4 ▶ Genome Informatics: High Throughput Sequencing Applications and Analytical Methods

WEEK TWO REVIEW

- ✓ Answers to last weeks homework:

[Answers week 2](#)

- ✓ Muddy Point Assessment (Only 25 responses):

[Responses](#)

- "More time to finish the assignment"
- "The [NCBI] sites were so slow"
- "More time with HMMER would be helpful"
- "Very nice lab"

Q18: NW DYNAMIC PROGRAMMING

Match: +2
Mismatch: -1
Gap: -2

THIS WEEK'S HOMEWORK

- ✓ Check out the "Background Reading" material online:
 - ▶ [Achievements & Challenges in Structural Bioinformatics](#)
 - ▶ [Protein Structure Prediction](#)
 - ▶ [Biomolecular Simulation](#)
 - ▶ [Computational Drug Discovery](#)

- ✓ Complete the lecture 1.3 homework questions: <http://tinyurl.com/bioinf525-quiz3>

"Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data."

... A hybrid of biology and computer science

"Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data."

Bioinformatics is computer aided biology!

"Bioinformatics is the application of computers to the collection, archiving, organization, and analysis of biological data."

Bioinformatics is computer aided biology!

Goal: Data to Knowledge

So what is **structural bioinformatics**?

So what is **structural bioinformatics**?

... **computer aided structural biology!**

Aims to characterize and interpret biomolecules and their assembles at the molecular & atomic level

Why should we care?

Why should we care?

Because biomolecules are "nature's robots"

... and because it is only by coiling into specific 3D structures that they are able to perform their functions

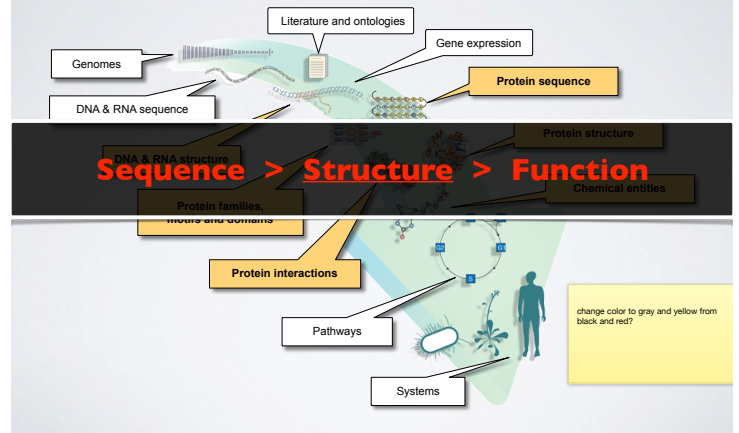

BIOINFORMATICS DATA

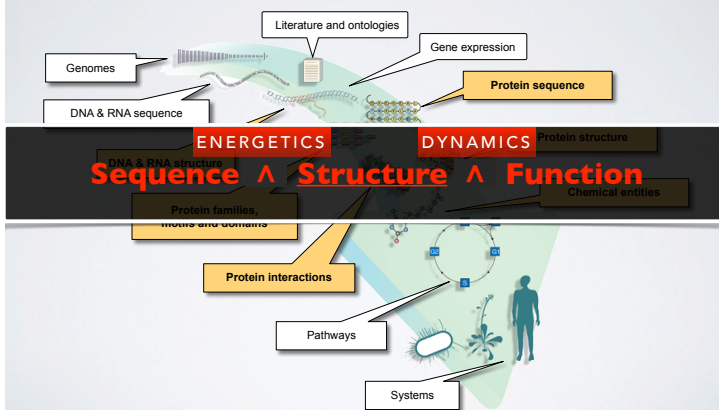

STRUCTURAL DATA IS CENTRAL

STRUCTURAL DATA IS CENTRAL

STRUCTURAL DATA IS CENTRAL

Sequence

- Unfolded chain of amino acid chain
- Highly mobile
- Inactive

Structure

- Ordered in a precise 3D arrangement
- Stable but dynamic

Function

- Active in specific "conformations"
- Specific associations & precise reactions

In daily life, we use machines with functional *structure* and *moving parts*

Genomics is a great start

Track Bike – DL 175

TRADITIONAL FOCUS **PROTEIN, DNA** AND **SMALL MOLECULE** DATA SETS WITH **MOLECULAR STRUCTURE**

Protein
(PDB)

DNA
(NDB)

Small Molecules
(CCDB)

Motivation 1: Detailed understanding of molecular interactions

Provides an invaluable structural context for conservation and mechanistic analysis leading to functional insight.

Motivation 1:
Detailed understanding of molecular interactions

Computational modeling can provide detailed insight into functional interactions, their regulation and potential consequences of perturbation.

Grant et al. PLoS. Comp. Biol. (2010)

Motivation 2:
Lots of structural data is becoming available

Structural Genomics has contributed to driving down the cost and time required for structural determination

Data from: <http://www.rcsb.org/pdb/statistics/>

Motivation 2:
Lots of structural data is becoming available

Structural Genomics has contributed to driving down the cost and time required for structural determination

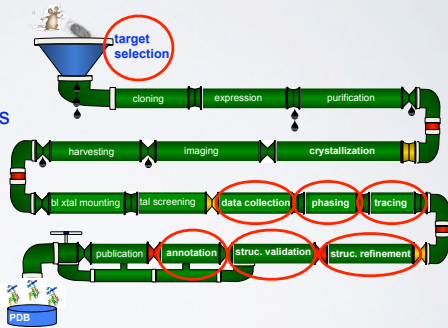

Image Credit: "Structure determination assembly line" Adam Godzik

Motivation 3:
Theoretical and computational predictions have been, and continue to be, enormously valuable and influential!

SUMMARY OF KEY **MOTIVATIONS**

Sequence > Structure > Function

- Structure determines function, so understanding structure helps our understanding of function

Structure is more conserved than sequence

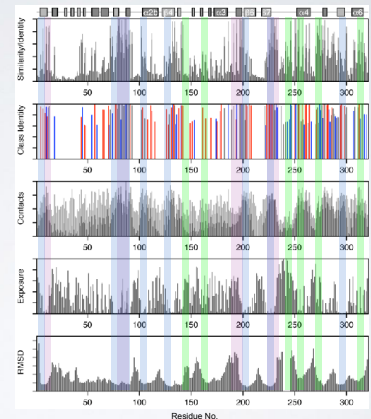

- Structure allows identification of more distant evolutionary relationships

Structure is encoded in sequence

- Understanding the determinants of structure allows design and manipulation of proteins for industrial and medical advantage

MAJOR RESEARCH AREAS AND CHALLENGES

Include but are not limited to:

- Protein classification
- Structure prediction from sequence
- Binding site detection
- Binding prediction and drug design
- Modeling molecular motions
- Predicting physical properties (stability, binding affinities)
- Design of structure and function
- etc...

With applications to Biology, Medicine, Agriculture and Industry

NEXT UP:

HIERARCHICAL STRUCTURE OF PROTEINS

Primary > Secondary > Tertiary > Quaternary

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

RECAP: AMINO ACID NOMENCLATURE

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

AMINO ACIDS CAN BE GROUPED BY THE PHYSIOCHEMICAL PROPERTIES

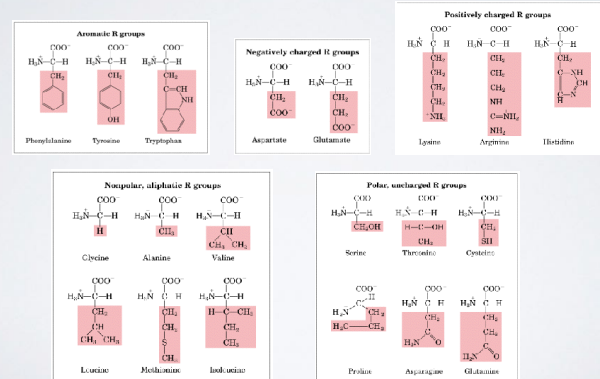

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

AMINO ACIDS POLYMERIZE THROUGH PEPTIDE BOND FORMATION

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

PEPTIDES CAN ADOPT DIFFERENT CONFORMATIONS BY VARYING THEIR PHI & PSI BACKBONE TORSIONS

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

PHI vs PSI PLOTS ARE KNOWN AS RAMACHANDRAN DIAGRAMS

- Steric hindrance dictates torsion angle preference
- Ramachandran plot show preferred regions of ϕ and ψ dihedral angles which correspond to major forms of **secondary structure**

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

MAJOR SECONDARY STRUCTURE TYPES ALPHA HELIX & BETA SHEET

α -helix

- Most common form has 3.6 residues per turn (number of residues in one full rotation)
- Hydrogen bonds (dashed lines) between residue *i* and *i+4* stabilize the structure
- The side chains (in green) protrude outward
- 3_{10} -helix and π -helix forms are less common

Hydrogen bond: $i \rightarrow i+4$

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

MAJOR SECONDARY STRUCTURE TYPES ALPHA HELIX & **BETA SHEET**

In **antiparallel** β -sheets

- Adjacent β -strands run in opposite directions
- Hydrogen bonds (dashed lines) between NH and CO stabilize the structure
- The side chains (in green) are above and below the sheet

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

MAJOR SECONDARY STRUCTURE TYPES ALPHA HELIX & **BETA SHEET**

In **parallel** β -sheets

- Adjacent β -strands run in same direction
- Hydrogen bonds (dashed lines) between NH and CO stabilize the structure
- The side chains (in green) are above and below the sheet

Image from: <http://www.ncbi.nlm.nih.gov/books/NBK21581/>

What Does a Protein Look like?

- Proteins are stable (and hidden) in water

- Proteins closely interact with water

- Proteins are close packed solid but flexible objects (globular)

- Due to their large size and complexity it is often hard to see what's important in the structure

- Backbone or main-chain representation can help trace chain topology

- Backbone or main-chain representation can help trace chain topology & reveal secondary structure

- Simplified secondary structure representations are commonly used to communicate structural details
- Now we can clearly see 2°, 3° and 4° structure
- Coiled chain of connected secondary structures

DISPLACEMENTS REFLECT INTRINSIC FLEXIBILITY

Superposition of all 482 structures in RCSB PDB (23/09/2015)

DISPLACEMENTS REFLECT INTRINSIC FLEXIBILITY

Principal component analysis (PCA) of experimental structures

KEY CONCEPT: **ENERGY LANDSCAPE**

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

Hydrogen-bond donor Hydrogen-bond acceptor

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- Hydrophobicity

Coulomb's law

$$E = \frac{k q_1 q_2}{D r}$$

q_1 & q_2 = electronic charges (Coulombs)
 r = distance (Å)

E = Energy
 k = constant
 D = Dielectric constant (vacuum = 1; $\text{H}_2\text{O} = 80$)

Key forces affecting structure:

- H-bonding
- Van der Waals
- Electrostatics
- **Hydrophobicity**

The force that causes hydrophobic molecules or nonpolar portions of molecules to aggregate together rather than to dissolve in water is called **Hydrophobicity** (Greek, "water fearing"). This is not a separate bonding force; rather, it is the result of the energy required to insert a nonpolar molecule into water.

NEXT UP:

KEY CONCEPT: POTENTIAL FUNCTIONS DESCRIBE A SYSTEMS **ENERGY** AS A FUNCTION OF ITS **STRUCTURE**

Two main approaches:

- (1). **Physics-Based**
- (2). **Knowledge-Based**

PHYSICS-BASED POTENTIALS ENERGY TERMS FROM PHYSICAL THEORY

$$U(\vec{R}) = \underbrace{\sum_{\text{bonds}} k_b^{\text{bond}} (r_i - r_0)^2}_{U_{\text{bond}}} + \underbrace{\sum_{\text{angles}} k_a^{\text{angle}} (\theta_i - \theta_0)^2}_{U_{\text{angle}}} + \underbrace{\sum_{\text{dihedrals}} k_d^{\text{dihedral}} [1 + \cos(n_i \phi_i + \delta_i)]}_{U_{\text{dihedral}}} + \underbrace{\sum_i \sum_{j \neq i} 4 \epsilon_{ij} \left[\left(\frac{\sigma_{ij}}{r_{ij}} \right)^{12} - \left(\frac{\sigma_{ij}}{r_{ij}} \right)^6 \right]}_{U_{\text{nonbond}}} + \sum_i \sum_{j \neq i} \frac{q_i q_j}{\epsilon r_{ij}}$$

U_{bond} = oscillations about the equilibrium bond length
 U_{angle} = oscillations of 3 atoms about an equilibrium bond angle
 U_{dihedral} = torsional rotation of 4 atoms about a central bond
 U_{nonbond} = non-bonded energy terms (electrostatics and Lenard-Jones)

TOTAL POTENTIAL ENERGY

- The total potential energy or enthalpy fully defines the system, U .

- The forces are the gradients of the energy.

$$F(x) = -dU/dx$$

- The energy is a sum of independent terms for: Bond, Bond angles, Torsion angles and non-bonded atom pairs.

Slide Credit: Michael Levitt

MOVING OVER THE ENERGY SURFACE

- Energy Minimization drops into local minimum.

- Molecular Dynamics uses thermal energy to move smoothly over surface.

- Monte Carlo Moves are random. Accept with probability $\exp(-\Delta U/kT)$.

Slide Credit: Michael Levitt

PHYSICS-ORIENTED APPROACHES

Weaknesses

Fully physical detail becomes computationally intractable
 Approximations are unavoidable
 (Quantum effects approximated classically, water may be treated crudely)
 Parameterization still required

Strengths

Interpretable, provides guides to design
 Broadly applicable, in principle at least
 Clear pathways to improving accuracy

Status

Useful, widely adopted but far from perfect
 Multiple groups working on fewer, better approx
 Force fields, quantum entropy, water effects
 Moore's law: hardware improving

SIDE-NOTE: GPUS AND ANTON SUPERCOMPUTER

SIDE-NOTE: GPUS AND ANTON SUPERCOMPUTER

KEY CONCEPT: POTENTIAL FUNCTIONS DESCRIBE A SYSTEMS **ENERGY** AS A FUNCTION OF ITS **STRUCTURE**

Two main approaches:

- (1). Physics-Based
- (2). Knowledge-Based

KNOWLEDGE-BASED DOCKING POTENTIALS

ENERGY DETERMINES **PROBABILITY** (STABILITY)

Basic idea: Use probability as a proxy for energy

Boltzmann:
 $p(r) \propto e^{-E(r)/RT}$

Inverse Boltzmann:
 $E(r) = -RT \ln[p(r)]$

Example: ligand carboxylate O to protein histidine N

- Find all protein-ligand structures in the PDB with a ligand carboxylate O
1. For each structure, histogram the distances from O to every histidine N
 2. Sum the histograms over all structures to obtain $p(r_{O-N})$
 3. Compute $E(r_{O-N})$ from $p(r_{O-N})$

KNOWLEDGE-BASED DOCKING POTENTIALS

"PMF", Muegge & Martin, J. Med. Chem. (1999) 42:791

A few types of atom pairs, out of several hundred total

$$E_{prot-lig} = E_{vdw} + \sum_{pairs (ij)} E_{type(ij)}(r_{ij})$$

KNOWLEDGE-BASED POTENTIALS

Weaknesses

Accuracy limited by availability of data

Strengths

Relatively easy to implement
 Computationally fast

Status

Useful, far from perfect
 May be at point of diminishing returns
 (not always clear how to make improvements)

 - Predicting functional dynamics & drug discovery

PREDICTING FUNCTIONAL DYNAMICS

- Proteins are **intrinsically flexible** molecules with internal motions that are often intimately coupled to their biochemical function
 - E.g. ligand and substrate binding, conformational activation, allosteric regulation, etc.
- Thus knowledge of dynamics can provide a deeper understanding of the **mapping of structure to function**
 - **Molecular dynamics** (MD) and **normal mode analysis** (NMA) are two major methods for predicting and characterizing molecular motions and their properties

MOLECULAR DYNAMICS SIMULATION

- Use force-field to find Potential energy between all atom pairs
- Move atoms to next state
- Repeat to generate trajectory

McCammon, Gelin & Karplus, *Nature* (1977)
 [See: <https://www.youtube.com/watch?v=ui1ZysMFcKk>]

- ▶ Divide **time** into discrete (~1fs) **time steps** (Δt)
 (for integrating equations of motion, see below)

- ▶ Divide **time** into discrete (~1fs) **time steps** (Δt)
 (for integrating equations of motion, see below)

- ▶ At each time step calculate pair-wise atomic **forces** ($F(t)$)
 (by evaluating **force-field** gradient)

Nucleic motion described classically

$$m_i \frac{d^2}{dt^2} \vec{R}_i = -\nabla_i E(\vec{R})$$

Empirical force field

$$E(\vec{R}) = \sum_{\text{bonded}} E_b(\vec{R}) + \sum_{\text{non-bonded}} E_n(\vec{R})$$

- ▶ Divide **time** into discrete (~1fs) **time steps** (Δt)
 (for integrating equations of motion, see below)

- ▶ At each time step calculate pair-wise atomic **forces** ($F(t)$)
 (by evaluating **force-field** gradient)

Nucleic motion described classically

$$m_i \frac{d^2}{dt^2} \vec{R}_i = -\nabla_i E(\vec{R})$$

Empirical force field

$$E(\vec{R}) = \sum_{\text{bonded}} E_b(\vec{R}) + \sum_{\text{non-bonded}} E_n(\vec{R})$$

- ▶ Use the forces to calculate **velocities** and move atoms to new **positions**
 (by integrating numerically via the "leapfrog" scheme)

$$v(t + \frac{\Delta t}{2}) = v(t - \frac{\Delta t}{2}) + \frac{F(t)}{m} \Delta t$$

$$r(t + \Delta t) = r(t) + v(t + \frac{\Delta t}{2}) \Delta t$$

BASIC ANATOMY OF A MD SIMULATION

- ▶ Divide **time** into discrete (~1fs) **time steps** (Δt)
 (for integrating equations of motion, see below)

- ▶ At each time step calculate pair-wise atomic **forces** ($F(t)$)
 (by evaluating **force-field** gradient)

Nucleic motion described classically

$$m_i \frac{d^2}{dt^2} \vec{R}_i = -\nabla_i E(\vec{R})$$

Empirical force field

$$E(\vec{R}) = \sum_{\text{bonded}} E_b(\vec{R}) + \sum_{\text{non-bonded}} E_n(\vec{R})$$

- ▶ Use the forces to calculate **velocities** and move atoms to new **positions**
 (by integrating numerically via the "leapfrog" scheme)

$$v(t + \frac{\Delta t}{2}) = v(t - \frac{\Delta t}{2}) + \frac{F(t)}{m} \Delta t$$

$$r(t + \Delta t) = r(t) + v(t + \frac{\Delta t}{2}) \Delta t$$

REPEAT, (iterate many, many times... 1ms = 10¹² time steps)

MD Prediction of Functional Motions

Yao and Grant, Biophys J. (2013)

Simulations Identify Key Residues Mediating Dynamic Activation

Yao ... Grant, Journal of Biological Chemistry (2016)

EXAMPLE APPLICATION OF MOLECULAR SIMULATIONS TO GPCRS

PROTEINS JUMP BETWEEN MANY, HIERARCHICALLY ORDERED "CONFORMATIONAL SUBSTATES"

H. Frauenfelder et al., Science 229 (1985) 337

MOLECULAR DYNAMICS IS VERY

Improve this slide

Example: F₁-ATPase in water (183,674 atoms) for 1 nanosecond:
 => 10⁶ integration steps
 => 8.4 * 10¹¹ floating point operations/step
 [n(n-1)/2 interactions]

Total: 8.4 * 10¹⁷ flop
 (on a 100 Gflop/s cpu: **ca 25 years!**)

... but performance has been improved by use of:

| | |
|------------------------------|--------------------|
| multiple time stepping | ca. 2.5 years |
| fast multipole methods | ca. 1 year |
| parallel computers | ca. 5 days |
| modern GPUs | ca. 1 day |
| (Anton supercomputer) | ca. minutes |

COARSE GRAINING: NORMAL MODE ANALYSIS (NMA)

- MD is still time-consuming for large systems
- Elastic network model NMA (ENM-NMA) is an example of a lower resolution approach that finishes in seconds even for large systems.

NMA models the protein as a network of elastic strings

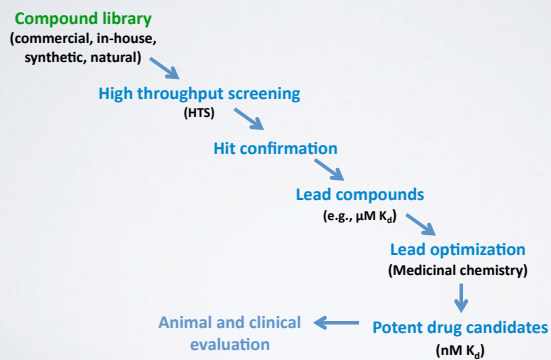

Proteinase K

THE TRADITIONAL EMPIRICAL PATH TO DRUG DISCOVERY

COMPUTER-AIDED LIGAND DESIGN

- Aims to reduce number of compounds synthesized and assayed
- Lower costs
- Reduce chemical waste
- Facilitate faster progress

Two main approaches:

- (1). **Receptor/Target-Based**
- (2). **Ligand/Drug-Based**

Two main approaches:

- (1). **Receptor/Target-Based**
- (2). **Ligand/Drug-Based**

SCENARIO I: RECEPTOR-BASED DRUG DISCOVERY

Structure of Targeted Protein Known: **Structure-Based Drug Discovery**

HIV Protease/KNI-272 complex

PROTEIN-LIGAND DOCKING

Structure-Based Ligand Design

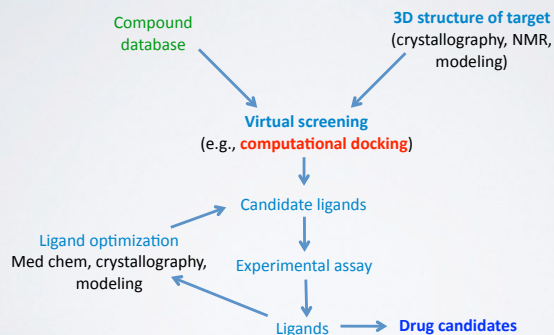

Docking software
Search for structure of lowest energy

Potential function
Energy as function of structure

STRUCTURE-BASED VIRTUAL SCREENING

COMPOUND LIBRARIES

Commercial
(in-house pharma)

Government (NIH)

Academia

FRAGMENTAL STRUCTURE-BASED SCREENING

<http://www.bellstein-institut.de/bozen2002/proceedings/hot1/hot1.html>

Multiple non active-site pockets identified

Small organic probe fragment affinities map multiple potential binding sites across the structural ensemble.

Ensemble docking & candidate inhibitor testing

Top hits from ensemble docking against distal pockets were tested for inhibitory effects on basal ERK activity in glioblastoma cell lines.

Ensemble computational docking

Compound effect on U251 cell line

PLoS One (2011, 2012)

Proteins and Ligand are Flexible

COMMON SIMPLIFICATIONS USED IN PHYSICS-BASED DOCKING

- Quantum effects approximated classically
- Protein often held rigid
- Configurational entropy neglected
- Influence of water treated crudely

Two main approaches:

- (1). **Receptor/Target-Based**
- (2). **Ligand/Drug-Based**

Experimental screening generated some ligands, but they don't bind tightly

A company wants to work around another company's chemical patents

A high-affinity ligand is toxic, is not well-absorbed, etc.

Scenario 2

Structure of Targeted Protein Unknown: **Ligand-Based Drug Discovery**

e.g. MAP Kinase Inhibitors

Using knowledge of existing inhibitors to discover more

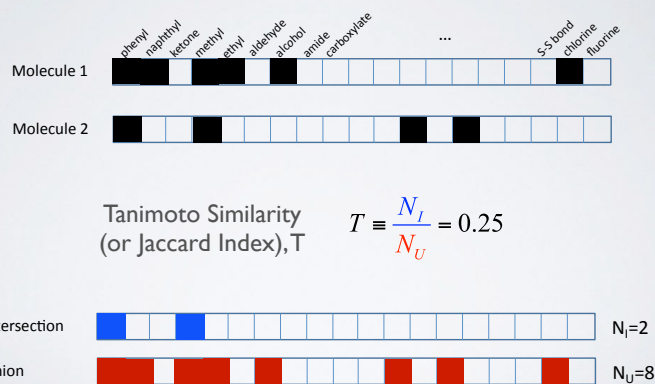

CHEMICAL SIMILARITY LIGAND-BASED DRUG-DISCOVERY

CHEMICAL FINGERPRINTS BINARY STRUCTURE KEYS

CHEMICAL SIMILARITY FROM FINGERPRINTS

Pharmacophore Models Φάρμακο (drug) + Φορά (carry)

A 3-point pharmacophore

Molecular Descriptors More abstract than chemical fingerprints

Physical descriptors

molecular weight
charge
dipole moment
number of H-bond donors/acceptors
number of rotatable bonds
hydrophobicity (log P and clogP)

Topological

branching index
measures of linearity vs interconnectedness

Etc. etc.

A High-Dimensional “Chemical Space”

Each compound is at a point in an n-dimensional space

Compounds with similar properties are near each other

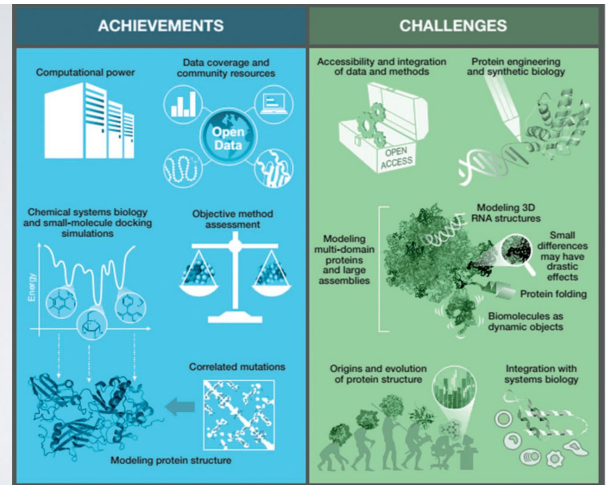

Apply **multivariate statistics** and **machine learning** for descriptor-selection.
(e.g. partial least squares, support vector machines, random forest, etc.)

CAUTIONARY NOTES

- **“Everything should be made as simple as it can be but not simpler”**
A model is **never perfect**. A model that is not quantitatively accurate in every respect does not preclude one from establishing results relevant to our understanding of biomolecules as long as the biophysics of the model are properly understood and explored.
- **Calibration of the parameters is an ongoing and imperfect process**
Questions and hypotheses should always be designed such that they do not depend crucially on the precise numbers used for the various parameters.
- **A computational model is rarely universally right or wrong**
A model may be accurate in some regards, inaccurate in others. These subtleties can only be uncovered by comparing to all available experimental data.

SUMMARY

- Structural bioinformatics is computer aided structural biology
- Described major motivations, goals and challenges of structural bioinformatics
- Reviewed the fundamentals of protein structure
- Introduced both physics and knowledge based modeling approaches for describing the structure, energetics and dynamics of proteins computationally

Ilan Samish et al. Bioinformatics 2015;31:146-150

INFORMING SYSTEMS BIOLOGY?
